Why Process Mining on S/4 HANA – Accounts Payable?

- Fast go live thanks to predefined content, SAP S/4 HANA and ERP integration.
- In addition to accounts payable, other business processes are available: purchase to pay, order to cash, accounts receivable, warehouse management, production planning, claims management, etc.
- Discover and monitor frequency, throughput time, process costs and automation rate.
- Determine compliance rate.
- Leverage built-in simulation capabilities.
- Benefit from extreme calculation speed on the huge process event data volume.

Model

Uses your most trusted data

- Connects to your financial accounting data as the primary source.

Uses best practices SAP metrics

- Uses best practices SAP metrics based on official event logs to get reliable results.

Built-in traceability

- Calculates on granular level throughout the whole process.

Ready to benchmark

- Allows to compare the KPIs against other companies of your group and regions.

Example: Accounts Payable Model

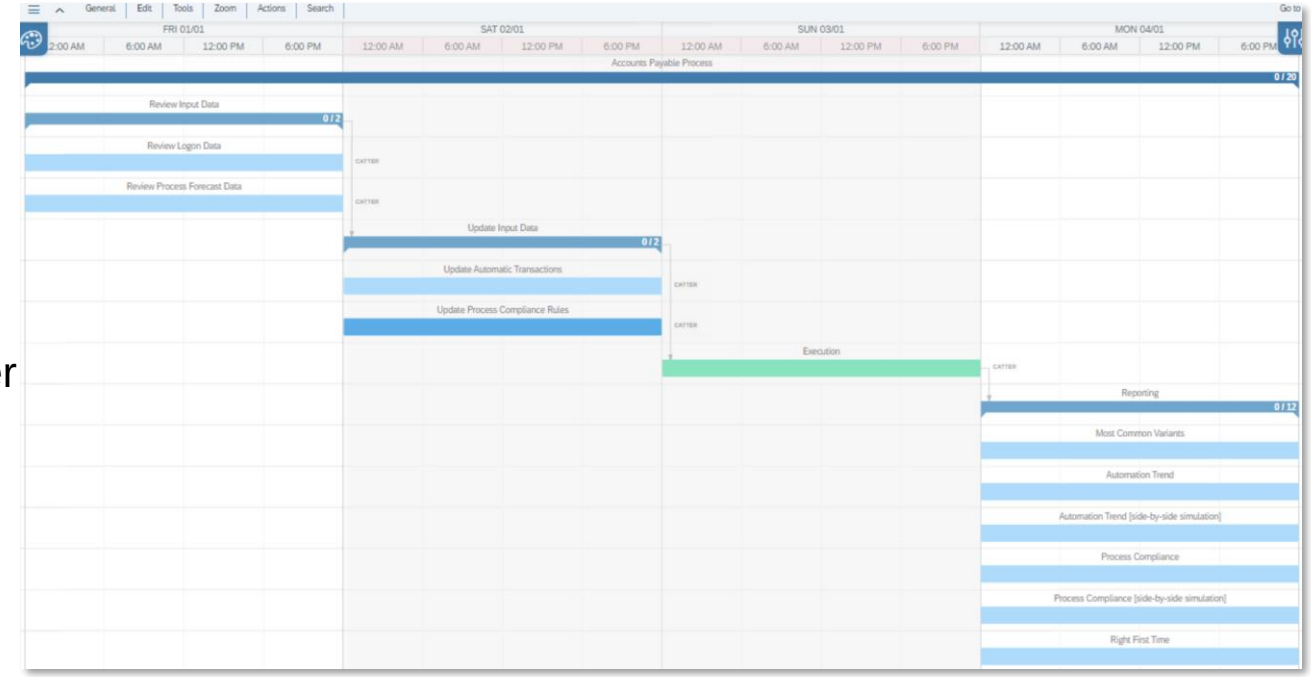
Workflow

Predefined Process Template

- A predefined process template orchestrates the periodic process mining update in the company and the teams involved. It comprises all activities with their dependencies and can be easily adapted, if needed.



Workflow

- A four-eyes principle workflow can be used to further structure the review process with submissions and approvals.

Traceability and Auditability

- The execution of all activities is logged and permanently available for evaluations and audits.

Simulation and Reporting

Predefined Reports

- Predefined results reports include visualizations and KPIs for process and activity frequency, throughput time, automation rate, compliance rate, process costs, cost to value ratio and thus optimization potential, which are easily adjusted to individual needs.

Interactive What-If Simulation

- Built in simulation capabilities allow to calculate the model with different parameters and assumptions.

Ad-Hoc Analysis

- The Ad-hoc analysis provides pivot tables and charts with powerful drill-down, slice and dice capabilities for large-scale data mining.

Summary

- SAP Profitability and Performance Management comes with a predefined content for Process Mining on S/4 HANA – Accounts Payable.
- The predefined content as well as the integration of SAP S/4 HANA and SAP ERP ensure high degree of automation and a short implementation time.
- Works directly on original ERP data, no data redundancy.
- Covers accounts payable process, but also other important business processes such as: purchase to pay, order-to-cash, accounts receivable, production planning, are covered in another contents.
- State-of-the-art user interface is attractive for data scientists and process mining experts. Ideal to extend the model without coding.
- Optionally the results can be used as driver input for the Profitability and Cost Management Content, to do allocations based on real measured frequencies and throughput times.
