## QM/PM Partner Roles

## QM/PM Partner Roles

### Use

During business processes, an enterprise negotiates with a number of natural and juristic persons. For example, a customer orders goods or services from the enterprise. Or a service provider offers services to customers. An employee in customer services processes the business procedure. The roles that these people take on are represented in the R/3 system as business partners.

Business partners can be:

- Internal employees (partners in Human Resources)
- Externals (customers or vendors)

### Integration

#### Functions in the HR System

In the HR system, you can define the following object types as partner types:

- Organizational Unit (O)
- Position (S)
- Person (P)

This data is sent to the Logistics system (LO).

#### Functions in the Logistics System

In the Logistics system, you define partner roles and the partner types that belong to them.

A partner role can be a sales representative and a partner type may be a person.

### Data Flow

The three HR object types are sent to the LO system.

### Prerequisites

Partner roles must be maintained in the LO system.

## Partner Roles (QM, PM)

### Purpose

You want to use data that is defined in the HR system in the Logistics system (LO).

### Prerequisites

To be able to use HR object types in the LO system, you must distribute them to the LO system. You must also define partner roles in the LO system.

### Process Flow

The HR message type HRMD\_A is used to distribute HR organizational models into the LO system.
