Evaluating Payroll Results	5
----------------------------------	---

Evaluating Payroll Results

Use

You can evaluate the payroll results using the respective country-specific schema x500. This schema is only used in a few country versions.

The payroll results are evaluated in an additional run, which is carried out by the payroll driver . A sequential file (TemSe object) is generated with the payroll data. The file created in this way is stored under the respective file name, your user ID, and the date and time of the program run. The subsequent evaluations access this data.

Prerequisites

The payroll run must have been completed successfully for the personnel numbers you want to post.

You are in the *ABAP Execute Program* screen. *Initial screen.*

Activities

1. You start the payroll driver with the appropriate evaluation schema.
2. Enter the appropriate values in the fields and set the required indicators.
3. Choose *Program* → *Execute* or *Execute + Print* or *In Background*.

If you have chosen *Display log*, a log will appear on screen after posting where you can view the evaluation data.
