# 1 Supported Platforms Overview

This overview of supported platforms for SAP Business One Cloud helps you to plan your implementation or upgrade projects. This overview applies to releases of **SAP Business One Cloud 1.0 and higher**.

Use this overview document in conjunction with the [SAP Productivity Availability Matrix](#) and the Administrator's Guides for SAP Business One on [SAP Help](#).

## 1.1 Disclaimers

- SAP delivers support only for selected releases at its own discretion, based on the business impact and the complexity of implementation. This document is provided for reference purposes only and does not represent a binding current commitment. As this overview is an offline document, refer to the [SAP Productivity Availability Matrix](#) for the latest up-to-date support information.
- In general, only **English** language platform versions are supported. Platform versions in other languages are generally supported if there are no issues specific to the platform versions in the other languages.
- SAP no longer issues support statements for SAP Business One on virtualization software as the responsibility for operating system compatibility lies with virtualization software vendors. SAP Business One runs on virtualization software just as it runs on non-virtualized operating system platforms.
- SAP Business One is only tested on major versions of Microsoft operating systems, databases, and Office software products. Service Packs delivered by Microsoft during a product's lifecycle are not tested separately but are automatically supported for SAP Business One.
- SAP investigates issues with Microsoft Service Packs on a case-by-case basis as a program error.
- For inquiries concerning supported platforms, open a ticket under the component **SBO-CRO-PLT** through the [Support Launchpad for SAP Business One](#). For platform-related information specific to **SAP Business One XL Reporter**, read SAP Note [1787431](#).
- The support of a given **SUSE Linux Enterprise Server version, Microsoft Office version or Web Browser version** depends on the underlying SAP Business One or SAP Business One for SAP HANA version and is independent of the respective SAP Business One Cloud version.
