

SAP Assurance and Compliance Software

Configuring SAP Audit Management

NOTIFICATION OF DOCUMENT DELIVERY STOP

As of product release 1.2 SP07, we no longer deliver a separate guide on configuration.

For information about how to configure your product solution delivered with SAP Assurance and Compliance software, please see the installation and security guides.

For more information about configuration, see the Extensibility Guide, which can also be accessed through the product's Application Help. If you are missing information in the Extensibility Guide, please let us know by using the feedback function. You can find this function in the right-hand side panel of the opened documentation in the Application Help.

NOTE: The information provided in the past delivery of solution-specific configuration guides remains largely unchanged and just as valid for product releases as of 1.2 SP07. You can continue to access the configuration guide from past deliveries by first selecting the product version from the drop-down list in the upper right-hand corner of the main product screen after you have logged on.
