1 About This Document

This document defines the functional scope of SAP Cloud Platform Master Data for business partners.

Further restrictions may apply based on your license agreement with SAP. Functions and capabilities described in the documentation of this product may exceed the functional scope of the product to explain integration with other SAP products that must be licensed separately.

Documentation

The following documentation is available for SAP Cloud Platform Master Data for business partners:

- This feature scope description

2 Introduction

SAP Cloud Platform Master Data for business partners provides reusable master data services on SAP Cloud Platform as a source of access to business partner master data, and it also addresses integration-related requirements.

This is a service that can be used as a standalone solution, and additionally, any on-premise or cloud system from your landscape can be used as a source of data for business partner.

3 Features

Feature	Description
Key mapping	You can use this feature to view business partner records that are linked in the source system with the records in SAP Cloud Platform maintained using SAP Cloud Platform Master Data for business partners.
Manage business partner records and customer master attributes	You can use this feature to create, read, and update business partner records in SAP Cloud Platform Master Data for business partners. You can also use this feature to create, read, update, and delete customer master attributes in SAP Cloud Platform Master Data for business partners.
Replication of business partner records along with customer master attributes to and from the leading system	You can use this feature to replicate business partner records along with customer master attributes between SAP Cloud Platform Master Data for business partners and the leading system. The leading system provides a central source of access to business partner master data in SAP Cloud Platform. These records can be consumed by Software-as-a-Service applications with SAP Cloud Platform Master Data for business partners.
i Note Leading system is a single source of truth for all your business partner records (for example, an SAP S/4HANA system).	
Duplicate check before business partner creation	You can use this SAP Fiori feature to check if there are existing duplicates before creating a business partner record in SAP Cloud Platform using SAP Cloud Platform Master Data for business partners.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

Gender-Related Language

We try not to use gender-specific word forms and formulations. As appropriate for context and readability, SAP may use masculine word forms to refer to all genders.
