1 Conversion Guide for SAP S/4HANA

SAP S/4HANA is the next-generation business suite. It is fully built on the most advanced in-memory platform existing today: SAP HANA. The product uses modern design principles with the SAP Fiori user experience (UX) as well as a new role-based user experience concept. With the move to SAP S/4HANA, you are benefitting from continuous application innovations such as:

- Application optimizations specific for SAP HANA in-memory platform
  With SAP S/4HANA, SAP optimizes the application to make best use of the capabilities of the SAP HANA database. For example, we removed aggregates, and reduced the data footprint.
- Responsive user experience design
  With SAP S/4HANA, SAP designs the application with the latest role-based user experience (UX).
- Unifying functionality in the core
  With SAP S/4HANA, SAP removes redundancy by providing one functionality for one objective.

With SAP S/4HANA, SAP helps businesses to run simple in the digital economy, including such topics and principles as the Internet of Things, Big Data, business networks, and mobile-first.

This guide explain the conversion process with which you can move from your existing SAP Business Suite to the next-generation business suite: SAP S/4HANA.
2 Getting Started

Read this guide carefully to get an overview of how to convert an existing SAP Business Suite system to SAP S/4HANA 1709.

This guide has to be used together with the following documents and tools:

- **Simplification Item Catalog**
  This tool allows you to search and browse simplification items online.
- **System Conversion to SAP S/4HANA using SUM 2.0 SP <latest version> (incl. DMO)**
- **Maintenance Planner User Guide**
- **SAP Readiness Check**
  This tool analyzes your SAP ERP 6.0 system and highlights important aspects of the conversion to SAP S/4HANA, such as identification of relevant simplification items, high-level custom code analysis, add-on compatibility, sizing, and more.

➤ Recommendation

Although not mandatory, this tool is highly recommended.

You find more information about these tools and guides (including where to find them), as well as additional important documents and SAP Notes relevant for the conversion in the section Documentation and SAP Notes for the Conversion [page 5].

The section Overview of the Conversion Process [page 8] provides information about the different phases of the conversion and the tools involved.

The section Preparing the Conversion [page 14] and Realizing the Conversion [page 27] provide details for those conversion phases.

2.1 Documentation, Tools, and SAP Notes for the Conversion

Required Documents, Tools, and SAP Notes

You require the following conversion assets to prepare and run a conversion project.
<table>
<thead>
<tr>
<th>Document</th>
<th>Available at</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Simplification Item Catalog</td>
<td><a href="http://help.sap.com/s4hana_op_1709">http://help.sap.com/s4hana_op_1709</a></td>
<td>Describes the simplifications in comparison to the SAP Business Suite product family such as, simplified functions, merged database tables, and new data models.</td>
</tr>
<tr>
<td>System Conversion to SAP S/4HANA using SUM 2.0 SP &lt;latest version&gt; (incl. DMO)</td>
<td><a href="https://support.sap.com/sitoolset">https://support.sap.com/sitoolset</a></td>
<td>Describes how to prepare the system for running the Software Update Manager, how to use it, and what general follow-up steps are required.</td>
</tr>
<tr>
<td>SAP Readiness Check</td>
<td><a href="https://help.sap.com/viewer/p/SAP_READINESS_CHECK">https://help.sap.com/viewer/p/SAP_READINESS_CHECK</a></td>
<td>This tool analyzes your SAP ERP 6.0 system and highlights important aspects of the conversion to SAP S/4HANA, such as identification of relevant simplification items, high-level custom code analysis, add-on compatibility, sizing, and more.</td>
</tr>
</tbody>
</table>

**Recommendation**

The tool is not mandatory, but highly recommended.

### Data Migration of Financials in SAP S/4HANA: Do not migrate twice!

Available at: [SAP Note 2294486](#)

Comment: Relevant if you are planning to convert a SAP Simple Finance, respectively SAP S/4HANA Finance, on-premise edition installation to SAP S/4HANA.

### Conversion of Financial Accounting to SAP S/4HANA

Available at: [SAP Note 2332030](#)

### S4TWL: Business partner data exchange between SAP CRM and SAP S/4HANA – required pre-conversion and post-conversion actions

Available at: [SAP Note 2285062](#)

---

### 2.2 Overview of the Conversion Process

SAP provides a process for the conversion to SAP S/4HANA. The following figure gives an overview of the tools, the phases, and the activities involved in the process.

**Recommendation**

We recommend that you do the activities in the sequence shown in the figure and explained in the sections below.

*S Consists of preparatory analysis and post-SUM adaptation of custom code.

SAP S/4HANA System Conversion: Sequence
Prepare Phase

Simplification Item Catalog

Before starting the realization phase of the conversion process, you also have to do the following preparatory activities:

To enable you to do an optimal planning of your path to SAP S/4HANA, we provide the Simplification Item Catalog. This tool allows you to search or browse the complete collection of simplification items grouped by product version and presented by application or functional area. Each simplification item details the steps that need to be taken for the conversion from a business and a technical point of view, both preparatory and follow-on steps and each item is available as a SAP Note.

**Recommendation**

We recommend that you consume the simplification items also via the SAP Readiness Check for SAP S/4HANA. Based on an analysis of the configuration, data, and usage of your productive SAP Enterprise Resource Planning system, the SAP Readiness Check for SAP S/4HANA identifies the simplification items relevant for your conversion.

For more information about how to use the SAP Readiness Check for SAP S/4HANA, see https://help.sap.com/viewer/p/SAP_READINESS_CHECK.

You find the Simplification Item Catalog at https://launchpad.support.sap.com/#/sic/.

**Note**

When using the Simplification Item Catalog directly instead of the SAP Readiness Check for SAP S/4HANA, please note that the catalog contains all the simplification items, not only those that are relevant for your conversion project. This means you need to identify those which are actually relevant for your system conversion (which the SAP Readiness Check for SAP S/4HANA does automatically). And when you have done this, you also need to look at the relevant simplification SAP Notes themselves to get all the available information. The SAP Notes contain all the required information for each simplification item. The SAP Readiness Check for SAP S/4HANA links directly to the most recent version of the SAP Notes.

Please carefully read the description of all simplification items relevant for you (as determined either by the SAP Readiness Check for SAP S/4HANA or via the Simplification Item Catalog), so that you understand the impact they might have on your system, business processes, or custom code, and you find out which activities you might have to do in your conversion project.

**Recommendation**

We recommend that you do a test conversion in a dedicated system in a distributed system landscape [page 12] to get the results of the checks early on in your conversion project.

1. **Planning**

   You need to gain an idea of the project steps and necessary preparations. Use the following tools to do your project planning:

   ○ Use the Roadmap Viewer to familiarize yourself with the project steps required for the transition to SAP S/4HANA.
   
   For more information, see https://roadmapviewer-supportportal.dispatcher.hana.ondemand.com/.
SAP Readiness Check for SAP S/4HANA

**Recommendation**

We highly recommend to run the SAP Readiness Check for SAP S/4HANA in advance of your conversion project to identify any issues you need to consider and activities you need to do in preparation for your project.

For more information about how to use the SAP Readiness Check for SAP S/4HANA, see [https://help.sap.com/viewer/p/SAP_READINESS_CHECK](https://help.sap.com/viewer/p/SAP_READINESS_CHECK).

See also, *SAP Readiness Check Versus SI-Check* [page 13].

2. **System Requirements**

You need to be aware of system requirements, start releases, conversion paths, and data volume. See the following sections for more information:

- System Requirements [page 15]
- What’s the Impact on Your System Landscape? [page 16]
- Supported Start Releases [page 17]
- Data Volume Reduction [page 17]

3. **Maintenance Planner**

You need to run the maintenance planner tool as a first step in the conversion process. It checks your components, add-ons, and business functions to ensure compatibility with SAP S/4HANA and also creates the stack file used for the actual conversion process (done by the Software Update Manager tool). For more information, see *Maintenance Planner* [page 18].

**Note**

This step is mandatory, because the Software Update Manager requires the stack file for the conversion process.

The Maintenance Planner has replaced the Maintenance Optimizer, which is not supported by SAP S/4HANA.

4. **Simplification Item-Check**

These checks identify important steps you need to take to make sure that your system can technically be converted and that your business processes can start running directly after the conversion process has been completed. For more information, see *Simplification Item-Check* [page 19].

**Note**

This step is mandatory and will be triggered again by the Software Update Manager. Ideally, you run the Simplification Item-Check (SI-Check) early in the process, so that you can take note of the planning information provided by the checks. Note that you no longer need the stack file for the checks.

See also, *SAP Readiness Check Versus SI-Check* [page 13].

5. **Custom Code Migration**

The custom code migration tool checks your custom code against a list of simplifications developed for SAP S/4HANA. For more information, see *Custom Code Analysis* [page 22] and *Custom Code Adaptation* [page 28].
Note
While not mandatory, this step is highly recommended. Ideally, you combine the SAP S/4HANA conversion project with housekeeping activities for your existing custom code base. In particular, you need a consolidated view of productively used custom developments and you should remove custom code that is no longer used.

We recommend that you do the steps 2 to 4 in the prepare phase in the sequence listed above. It is, however, technically possible to do them independently or in parallel.

6. Cross-application preparation activities
In addition to the general preparation steps described above, you also need to do some cross-application preparations. For more information, see Cross-Application Preparations [page 22].

7. Application-specific preparation activities
In addition to the cross-application preparations, you may also need to do some application-specific preparatory steps. These steps and their documentation are partly provided by the pre-checks and the custom code checks.
For a complete overview of all necessary steps, see the Simplification List (mentioned above). For an overview of some important preparations steps, see List of Application-Specific Preparations [page 25].
For more information about preparations for the conversion of Financial Accounting, see SAP Note 2332030.

Realize Phase

After you have done the steps of the prepare phase, you continue with the activities of the realize phase:

1. Software Update Manager (SUM)
   When you have completed the steps above, and have implemented all the adaptations required to ensure your system and your custom code is suited to SAP S/4HANA, you then run the SUM. The SUM does the database migration (if required), the actual software update, and the data conversion.
   For more information, see Realizing the Conversion [page 27].
   After the completion of the SUM run, we highly recommend that you adapt your custom code, see Custom Code Adaptation [page 28].

2. Cross-application follow-on activities
   Other manual cross-application activities may also be required. For more information, see Cross-Application Follow-On Activities [page 28].

3. Application-specific follow-on activities
   In addition to the cross-application follow-on activities, you may also need to do application-specific manual steps. These steps and their documentation are provided by the pre-checks and the custom code checks, which provide the list of simplification items relevant for your specific systems.
   For a complete overview of all necessary steps, see the Simplification List (mentioned above). For an overview of some important follow-on steps, see List of Application-Specific Follow-On Activities [page 35].
   For more information about the migration of Finance Data, see SAP Note 2332030.
2.3 Conversion in a Distributed System Landscape

When planning your conversion project, you should use a distributed system landscape as shown in the figure below. The figure is an example of a very simple version of a distributed system landscape comprising only development and productive systems to illustrate the principle.

Conversion in a Distributed System Landscape

The figure shows that there is a development system (DEV) used to apply updates and patches to the productive system (PROD), which, at the beginning of the conversion project (t1), is a SAP Business Suite system. You then set up a second development system (DEV 2) as a system copy of the original DEV system. You use the second development system to perform and test all phases of the conversion. You can collect all the necessary software changes during the test conversion in transport requests, including those that can only be done after a conversion (for example, the Finance customizing). Note that DEV t1 and DEV t2 as shown in the figure describe the same system, at points in time before (t1) and after (t2) the conversion. The collected transports with the required software changes are then handed over to the Software Update Manager (SUM) tool and applied during the real conversion of the productive system. Note that PROD t1 and PROD t2 as shown in the figure also describe the same productive system before (t1) and after (t2) the conversion.

The use of a distributed system landscape for your conversion allows you to take as long as needed to identify and process the software changes required by the conversion and then apply these changes efficiently during the conversion of your productive system to minimize downtime.
2.4 SAP Readiness Check Versus SI-Check

The tools SAP Readiness Check and Simplification Item-Check (SI-Check) are used to support the conversion process, see also Overview of the Conversion Process [page 8]. The following table explains the differences between the two tools.

For more information, see:

- SAP Note [2290622](http://example.com) (about the SAP Readiness Check).
- Simplification Item-Check [page 19]

<table>
<thead>
<tr>
<th>Tool Comparison</th>

</tbody>
</table>
3 Preparing the Conversion

For the conversion to SAP S/4HANA you have to prepare an overall project plan and schedule the tasks. The preparation activities described in this section give you an idea of what is involved. For a short overview of the process and tools, see Overview of the Conversion Process [page 8].

**Note**
In addition, review the planning section of the Software Update Manager guide System Conversion to SAP S/4HANA using SUM 2.0 <latest version> (incl. DMO) at https://support.sap.com/sitoolset Software Logistics Toolset (SL Toolset) ➔ System Maintenance ➔.

**Note**
You find the cross-application preparation steps in this guide; you get the application-specific preparation steps with the Simplification Item-Check and custom-code checks and with the Simplification Item Catalog or the SAP Readiness Check. Some of the most important application-specific preparation steps are also listed in this section: List of Application-Specific Preparations [page 25].

Please see also SAP Note 2495992 ➔.
3.1 System Requirements

Unicode

As a prerequisite for the conversion, your system needs to be a Unicode system. If your system is still non-Unicode, you can follow a two-step conversion approach: First, perform a combined upgrade and Unicode conversion with one of the supported start releases as target, then perform the conversion to SAP S/4HANA 1709.

For additional information, see Unicode Conversion Overview (on SAP SCN).

Application Server ABAP Only

Your system has to be an AS ABAP-only system. Dual-stack systems (AS ABAP and AS Java combined in one system) are not supported for the conversion. If your system is as dual-stack system, you have to split it before doing the conversion.

For additional information on how to perform a dual-stack split, see:

- SAP Note 1686144
- SAP Note 1655335
- Guide at https://support.sap.com/sitoolset System Provisioning Split Option of Software Provisioning Manager Dual Stack Split Guides Guides for Systems based on SAP NetWeaver 7.1 and Higher
- Dual Stack Split

CDS Views (Core Data Services)

If you need to adapt your custom code during the conversion of your development system, you may need to create or edit CDS view. For example, to reflect your specific table appends in related CDS compatibility views. To find out whether these activities are required in your case, check the results of the corresponding Simplification Item-Checks and the S/4HANA-specific code inspector checks.

For additional information, see:

- Simplification Item-Check [page 19]
- Custom Code Migration [page 22]
- Configuring the ABAP Back-end for ABAP Development Tools
- CDS - Core Data Services (on SAP SCN)
- http://scn.sap.com/community/abap/eclipse
3.2 What's the Impact on Your System Landscape?

When you convert your system to SAP S/4HANA, you may have to adapt further systems or components in your system landscape.

SAP Enterprise Resource Planning (SAP ERP) Java Components

SAP S/4HANA Java components are obsolete with SAP S/4HANA. You have to remove the technical Java system from the respective productive system in the Landscape Management Database (LMDB).

SAP NetWeaver

SAP NetWeaver 7.52 for SAP S/4HANA 1709

SAP S/4HANA 1709 requires SAP NetWeaver 7.52 for SAP S/4HANA 1709.

For additional information about SAP NetWeaver 7.52 for SAP S/4HANA 1709, see:

- Information about the upgrade to SAP NetWeaver 7.52 for SAP S/4HANA 1709 in SAP Note 2350408
- Minimal database system platform requirements for SAP NetWeaver 7.52 in SAP Note 2329005

SAP NetWeaver AS for Java Instances

The following SAP NetWeaver AS for Java instances are relevant for SAP S/4HANA 1709:

- Adobe Document Services
- Enterprise Services Repository
- Advanced Adapter Engine Extended

These instances need to run on SAP NetWeaver 7.3 EHP1 (or higher).

Enterprise Services Repository (ESR) Content: You have to apply the ESR content XI CONTENT S4CORE 101.

SAP Fiori Front-End Server

SAP S/4HANA 1709 requires SAP NetWeaver 7.52 as front-end server.

You can use an existing front-end server (hub) for the SAP Fiori for SAP S/4HANA 1709 installation. Existing apps continue to run against the old back-end systems while the newly installed applications of SAP Fiori for S/4HANA 1709 need to be configured to run against the SAP S/4HANA 1709 system. As a prerequisite, you have to migrate the database of the central hub system (supported databases are SAP HANA, SAP MaxDB, or SAP ASE) and upgrade the system.

You can also run the SAP Fiori server as an add-on to the SAP S/4HANA 1709 server.

For additional information about installing the SAP Fiori server, see the SAP Help Portal at https://help.sap.com/fiori_implementation.

### 3.3 Supported Start Releases

For a one-step conversion, your system needs to have a minimum release level. The following start releases are supported:

- SAP Enterprise Resource Planning (ERP) 6.0, EHP 0-8
- SAP Business Suite powered by SAP HANA
- SAP Simple Finance Add-On 1.0 for SAP Business Suite powered by SAP HANA
- SAP Simple Finance, on-premise edition 1503
- SAP S/4HANA Finance 1605

Not all start releases may initially be supported, see SAP Note 2277083 for more information. Also check the SAP S/4HANA 1709: Release Information Note 2482453 for the required feature package stack equivalencies.

### 3.4 Data Volume Reduction

SAP Data Volume Management is designed to reduce the data footprint so that you can achieve a shorter conversion duration due to reduced load size. Data Volume Management (DVM) offers various capabilities supporting the pre- and post-conversion phases. One central tool is the SAP DVM Work Center (DVM WoC) in SAP Solution Manager, including tools with a special focus on SAP HANA.

- Guided Self Service: You can generate a best practice document to determine data that can be reduced most efficiently in an SAP system before the conversion. You can use the same tool after the conversion to develop a blueprint for a DVM strategy.
- Reorganization and Compression: You can use this tool without a SAP HANA context in order to simulate the savings gained by reorganizing tables or databases or compressing the database.
- In addition, you can simulate the future system size of your system. This is useful for a forecast of the impact any planned measures may cause.

Beside the DVM Work Center, Data Volume Management offers services to give you an overview of your data distribution and quality as well as services to help you to develop a DVM road map for your system landscape. All services allow you to make flexible decision about your content and data volume management.

### Additional Information

For more information, see the SAP Help Portal at http://help.sap.com/solutionmanager SAP Solution Manager <release> Application Help SAP Library Application Operations.

3.5 Maintenance Planner

Overview

You have to use the Maintenance Planner to do the conversion to SAP S/4HANA 1709. The Maintenance Planner generates the download files (add-ons, packages, DBDs, and the stack configuration file) that the Software Update Manager (SUM) uses to do the conversion. In particular, the Maintenance Planner checks if the following items are supported for the conversion:

- Add-ons to your system
- Active business functions in your system
- Industry solutions

If there is no valid conversion path for any of the items listed above (for example, an add-on is not released for the conversion yet), the Maintenance Planner prevents the conversion. After the check, the Maintenance Planner creates the stack configuration file (stack.xml).

Note

In order to generate the stack.xml, you need to have an SAP S/4HANA license. You can do the above checks without a license, but you cannot create a stack.xml with the Maintenance Planner without a license.

For preparatory steps specific to the conversion to SAP S/4HANA, see also Prepare the Use of the Maintenance Planner [page 23].

Business Functions

Business functions can have the following status: always_on, customer_switchable, and always_off. This results in the following behavior during the conversion:

- If a business function was switched on in the start release system, but defined as always_off in the SAP S/4HANA target release, then a system conversion is not possible with this release.
- If a business function was switched off in the start release system, but defined as always_on in the SAP S/4HANA target release, then the business function will be activated during the conversion.
- If a business function is defined as customer_switchable in the SAP S/4HANA target release, it will keep the state defined in the target release during the conversion.

For more information about always-off and always-on business functions in SAP S/4HANA 1709, see SAP Notes 2240359 and 2240360.
Add-Ons

During the conversion, add-ons are either merged into SAP S/4HANA or deleted if no successor is available. Some add-ons may be included without being fully functional.

For a list of supported add-ons, see SAP Note 2214409. For information about uninstalling add-ons, see SAP Note 2011192.

Industry Solutions

For information about supported industry solutions, see SAP Note 2491467.

3.6 Simplification Item-Check

With SAP S/4HANA 1709 the Simplification Item-Check (SI-Check) replaces the pre-checks available with earlier SAP S/4HANA releases. The SI-Check identifies all simplification items relevant for the current system. They will be called by the Software Update Manager (SUM) tool to ensure that the system is in a consistent state.

Note

For conversions with the target releases SAP S/4HANA 1511 and 1610 (all feature package stacks), the SUM still calls the old pre-checks which are delivered with SAP Note 2182725.

The SI-Check is delivered with SAP Notes 2399707 and 2502552. SAP Note 2399707 delivers the new check report; SAP Note 2502552 delivers the check classes via transport-based correction instructions (TCI) and prerequisite notes.

Implementing TCI and the SI-Check

1. To enable TCI implementation, follow the instructions provided in SAP Note 2187425 (see especially the PDF file attached to the SAP Note).

   Note

   If you do not enable your system to install TCI notes, SAP Note 2502552 will be implemented without the TCI part, which will cause missing check class errors.

2. Follow the process description in SAP Note 2502552 to implement the SI-Checks.
Running the SI-Check

You run the SI-Check to identify the simplification items relevant for your conversion project. We recommend to do this early in the project, to get an overview of the conversion scope.

1. **Start the report** `/SDF/RC_START_CHECK` in transaction `SA38`.
2. In the section *Simplification Item Check Options*, choose the target SAP S/4HANA version.
3. Choose the mode in which you want to run the checks:
   - In online mode: The results are displayed immediately after the check is finished.
   - As a background job: We recommend this option if the check will need a long running time.
4. Run the checks to get an overview over all simplification items and then check the system consistency with `Check Consistency for All`.
5. Check the results

The report returns a list of relevant and irrelevant simplification items. We recommend that you check every relevant simplification item for the impact it will have on your conversion project.

Some simplification items have a consistency check. The consistency check identifies inconsistencies in the system that would be a problem during the SUM process. It also provides additional information on how to solve the problem.

Some of the error messages from the consistency check aim for you to read and understand the information provided by the consistency check error – for example, the information might be about data loss incurred during the conversion process. These errors can only be processed by creating an exception for them which is logged in the system. The errors are highlighted in the report in the column `Exemption Possible`, so that you can see which errors need an exemption.

For more information about how to use the SI-Checks, see the user guide in SAP Note [2399707](https://support.sap.com/).

---

**SI-Check Messages and Their Meanings**

The SI-Checks checks your system for data consistency (necessary for the conversion of existing data) and effects on the data after the conversion. The severity of the resulting messages indicates whether there are no inconsistencies, warnings you should look at, or inconsistencies you need to resolve. The results are provided as green, yellow, or red messages:

<table>
<thead>
<tr>
<th>Message Color</th>
<th>Message Return Code</th>
<th>Descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>0</td>
<td>These messages indicate that there are no technical or other inconsistencies. They also function as status messages and indicate that the conversion can go ahead.</td>
</tr>
</tbody>
</table>
### Message Color | Message Return Code | Descriptions
---|---|---
**Yellow** | 4 | These messages provide important information (or warnings) about various topics, such as changes to business functions, or adaptations that can be done either before or after the conversion (but must be done to ensure business continuity). They indicate that there are no technical problems for the conversion itself. However, some of these yellow messages provide information about possible data changes, changes in functionality, or required tasks after conversion. For instance, per default, no custom table appends are retained during the conversion – the data from those fields is just lost.

⚠️ Caution
Please do not underestimate yellow messages. Read them carefully and do what is required to ensure system consistency after the conversion, so that business continuity is not compromised.

**Red** | 7 | These messages show skippable errors that indicate important changes for the affected simplification items. The errors are no inconsistencies, but you need to confirm that you have read and understood them. Usually they point out imminent data loss, deprecation, or required activities after conversion. Once you have confirmed (that is, exempted) them, they will no longer act as blockers for the conversion.

8 or 12 | These messages always indicate inconsistencies in the system. These inconsistencies need to be solved before the conversion, as they would act as blockers in later SUM phases. Please read the messages for information about how you can solve the inconsistencies.

ℹ️ Note
The Software Update Manager (SUM) runs the SI-Check at the beginning of the SUM process and again just before the downtime. At the beginning, the SUM process is stopped if a message with return code 12 is detected. Just before the downtime, the SUM process is stopped if a message with return code 8 or higher is found. So, for the SUM process to run successfully, you need to make sure that all the inconsistencies found by the SI-Check with message return codes at 8 or higher are solved.

---

### How to Perform Accounting Pre-Checks

Controlling and General Ledger pre-checks are included in the Simplification Item-Check but the pre-check program for Asset Accounting (FI-AA) is not included in this report. To run pre-checks for Asset Accounting you need to use the report `RASFIN_MIGR_PRECHECK` and implement the SAP Notes listed in the collective SAP Note 2333236. The report `RASFIN_MIGR_PRECHECK` needs to be run separately in each of your productive clients.

After you have technically converted your system to SAP S/4HANA, you have to migrate your migration-relevant Customizing settings as well as your General Ledger, Asset Accounting, Controlling and Material Ledger data to the new data structure.

For more information about the conversion of Financial Accounting, see SAP Note 2332030.
3.7 Custom Code Analysis

The custom code migration checks are based on the simplification item concept. With SAP S/4HANA, business processes have been changed and simplified. Before converting to SAP S/4HANA, you need to check your custom code against the SAP S/4HANA simplifications in a SAP NetWeaver 7.52 system.

The simplifications are loaded into the Custom Code Migration tool. After you run the tool, you get a list of instances where your custom code does not comply with the scope and data structure of SAP S/4HANA.

Note

The custom code checks do not yet identify all the instances where your custom code does not comply with SAP S/4HANA. For a full overview of changes that may affect your custom code, see the Simplification List, as explained in Overview of the Conversion Process [page 8].

We highly recommend that you perform these checks before starting the conversion process, because this step is the most important preparation for your ABAP custom code on the way to SAP S/4HANA. Even if you do not plan to take development actions before the conversion, these checks will give you a sound foundation for your project planning and organization. They also enable you to decide on helpful preparatory activities, such as the decommissioning of unused custom code.

The application content of the simplification database is being increased and improved over time. In addition to the custom code analysis and adaptations based on the Custom Code Migration tool, you also need to test the custom code within SAP S/4HANA.

For additional information about the Custom Code Migration tool, see:

- SAP Note [2241080](https://support.sap.com/2241080) for information about how to download the simplification database.

3.8 Cross-Application Preparations

Before starting conversion activities, you need to do the preparatory activities described in the next sections.
3.8.1 Prepare the Use of the Maintenance Planner

Context

Besides the general preparation described in the Maintenance Planner User Guide, you have to make the following preparatory steps specific to the conversion to SAP S/4HANA:

Procedure

2. Check the SPAM/SAINT version in your source release system.
   
   **Note**
   
   SPAM/SAINT patch 66 (or higher) is required.
3. Apply SAP Note 2186164 to your SAP Solution Manager system.
4. Create an RFC-connection between your source release system and SAP Solution Manager:
   
   a. In SAP Solution Manager, choose SOLMAN_WORKCENTER Solution Manager Administration Landscape (Technical Systems).
   b. Click RFC connections Start New Window.
   c. Select client 000 and choose Advanced Mode.
   d. Under Export Options, fill in the field SAP Solution Manager Host Name.
   e. Under Communication RFCs, select Create SM_<SID>CLNT<CLNT>_READ.
   f. Select Create New User.
   g. Enter a password.
   h. Enter a user and password under Managed System Setup Administrator, and choose Test Login in the group Administration Users to check that it works.

Related Information

Maintenance Planner [page 18]
3.8.2 Remove Client 066

Context

Client 066 is the Early Watch client which was set up during the installation of your system. This client is not used in SAP S/4HANA. To prevent issues, for example, with job scheduling, you have to remove it before starting the conversion.

Procedure

To remove client 066, proceed as described in SAP Note 1749142.

3.8.3 Uninstall SAP Fiori Apps

Context

If you have SAP Fiori apps installed locally on your source system, you need to uninstall them if they are not released for USER INTERFACE TECHNOLOGY 7.50 (SAP_UI 7.50). If you do not uninstall these apps, the Maintenance Planner will not allow a conversion for your system.

Note

Use the SAP Fiori Apps Reference Library to check which applications are available for SAP S/4HANA 1709.

Procedure

1. Check SAP Note 2034588 for a list of apps that you need to uninstall and the steps required to do so.

   Note

   SAP Note 2200415 provides a list of all apps that are supported by SAP_UI 7.50.

2. Uninstall the apps using SAINT. For more information, see SAP Note 201192.
3.8.4 Prepare the Conversion of Authorizations

Check the simplification items relevant for your conversion project for required transactions used by your existing business roles. After the technical conversion with the Software Update Manager tool, you need to adjust your business roles.

For more information, see Follow-On Activities for the Conversion of Authorizations [page 32].

3.8.5 Prepare the Conversion for SAP Fiori UX Enablement

The recommended access to functions in SAP S/4HANA is through SAP Fiori UX with SAP Fiori Launchpad that you run in a browser or in SAP Business Client. If you plan to follow this recommendation, you need to prepare the conversion of your existing authorization concept to support the role-based menu structure and authorization concept of SAP Fiori Launchpad.

For more information on the role-based concept for SAP Fiori Launchpad, see the section App Implementation in the UI Technology Guide for SAP S/4HANA at http://help.sap.com/s4hana_op_1709 Product Documentation. One of the conversion goals is to keep your existing authorization concept as a basis for the converted authorization concept.

You need to review your authorization concept and map existing back-end role menu structures to SAP Fiori catalogs. SAP Fiori catalogs are assigned to front-end roles that define the SAP Fiori Launchpad content available to users. Use the SAP Fiori App Library to check the SAP Fiori catalogs or roles available for SAP S/4HANA 1709 applications.

We recommend to deploy SAP Fiori for SAP S/4HANA on its own front-end server in your system landscape. For more information, see http://help.sap.com/fiori_implementation Installation and Upgrade SAP Fiori: Getting Started SAP Fiori Deployment Options.

3.9 List of Application-Specific Preparations

The list below contains important application-specific preparatory steps and where to find their documentation.

<table>

4 Realizing the Conversion

After the preparation phase, you start with the realization of the conversion to SAP S/4HANA using the Software Update Manager (SUM) tool. For a short overview of the entire process, see Overview of the Conversion Process [page 8].

After the SUM run, we highly recommend that you adapt your custom code, see Custom Code Adaptation [page 28].

**Note**
You find the cross-application follow-on steps in this guide; you get the application-specific follow-on steps with the Simplification Item-Check and custom-code checks and with the Simplification List for SAP S/4HANA. Some of the most important application-specific preparation steps are also listed in this section: List of Application-Specific Follow-On Activities [page 35].

Please see also SAP Note 2495932.

4.1 Conversion Using SUM

Software Update Manager (SUM) is the technical tool used for the system conversion to SAP S/4HANA.

**Note**
You have to run the Maintenance Planner before the SUM, because the SUM requires the stack.xml generated by the Maintenance Planner as an input. For more information, see Maintenance Planner [page 18].
Within the SUM-process the following steps are done in a one-step procedure (for dedicated start releases):

1. Database migration (optional).
   If your source system is not yet running on the SAP HANA database, use the database migration option (DMO) of the Software Update Manager to migrate your database to SAP HANA during the conversion.
2. Installation of the SAP S/4HANA software.
3. Conversion of your data into the new data structure used by SAP S/4HANA (this is the automated part of the data migration).

For all information about using the SUM, see the guide System Conversion to SAP S/4HANA using SUM 2.0 <latest version> (incl. DMO) available at http://help.sap.com/s4hana_op_1709

4.2 Custom Code Adaptation

After the Software Update Manager (SUM) has done the technical conversion, you can start adapting your custom code.

1. You need to adapt any modifications and enhancements using the standard transactions SPDD, SPAU and SPAU_ENH.
   This is the same process as in previous upgrades in the SAP Business Suite product portfolio except that the tools SPDD and SPAU have been renewed.
2. You need to fix any issues due to SAP S/4HANA simplifications.
   To find the issues, you use the ABAP Test Cockpit (ATC) and do a check run with the check variant S4HANA_READINESS locally in your converted system.

We recommend to use the ABAP development tools for Eclipse to do the custom code adaptation as SE80 no longer supports all development object (such as CDS Views) needed in SAP S/4HANA. For more information about these tools, see the SAP Help Portal at http://help.sap.com/s4hana_op_1709

For more information about doing local ATC runs, see the SAP Help Portal at http://help.sap.com/s4hana_op_1709

4.3 Cross-Application Follow-On Activities

After the Software Update Manager (SUM) has run, you need to do the follow-on activities described in the next section.
4.3.1 Adapting Database Extensions to SAP S/4HANA

Context

When you convert your system from SAP Suite on HANA to SAP S/4HANA, modifications to the SAP HANA database remain unchanged. However, to make your modifications visible on the UI, manual steps can be required in different content layers.

Procedure

1. If required for your modifications, adapt the relevant Core Data Service (CDS) views in the SAP Business Suite layer. You can extend CDS views by using ABAP development tools. For more information, see http://help.sap.com/abapdocu_740/en/index.htm ABAP Keyword Documentation ABAP Dictionary ABAP CDS in ABAP Dictionary ABAP CDS - Views ABAP CDS - DDL Statements ABAP CDS - EXTEND VIEW.

2. If required for your modifications, adapt the OData services for your CDS views in the SAP Gateway layer:
   ○ For OData services that are included in a CDS view definition as an annotation, the relevant artifacts are generated automatically. No modifications are required in the SAP Gateway layer. For more information, see http://help.sap.com/s4hana_op_1709 SAP NetWeaver for SAP S/4HANA Function-Oriented View Application Server Application Server ABAP Application Development on AS ABAP ABAP Development Tools - Eclipse SAP ABAP CDS Development User Guide Exposing CDS view as OData Service.
   ○ OData services that are not included in a CDS view definition must be redefined in Service Builder. For more information, see http://help.sap.com/s4hana_op_1709 SAP NetWeaver for SAP S/4HANA Function-Oriented View SAP Gateway Foundation (SAP_GWFND) SAP Gateway Foundation Developer Guide SAP Gateway Service Builder Data Modeling Basics Data Modeling Options Redefining Services.

3. If available for your app, you can use runtime adaptation to add, move, or remove view fields in the UI layer. For more information, see Adapting the User Interface [page 35]. As an alternative, you can extend views by using SAP UI5 extension points. For more information, see http://help.sap.com/s4hana_op_1709 SAP NetWeaver for SAP S/4HANA Function-Oriented View UI Technologies in SAP NetWeaver SAPUI5: UI Development Toolkit for HTML5 Extending Apps View Extension.

4.3.2 Output Management

SAP S/4HANA introduces a new style of output management. Note that other existing frameworks can be used as well, depending on the application.

You make settings for output control in Customizing under Cross-Application Components Output Control.
This is an overview of the required technical setup.

**Prerequisites for Output Control**

- bgRFC configuration has been set up
- Storage system and category have been maintained
- BRFplus is active and usable
- Adobe Document Services is available (when using Adobe Forms)

**bgRFC (Background Remote Function Call)**

Output control uses a bgRFC to process output. Therefore, you need to maintain the bgRFC configuration. Otherwise, no output can be performed.

You can perform all the relevant steps in transaction **SBGRFCCONF**. One of the most important steps is defining a supervisor destination, as bgRFC doesn't work without it.

For more information, enter the keyword **bgRFC Configuration** at [http://help.sap.com](http://help.sap.com), and refer to SAP Note [2309399](http://help.sap.com) and SAP Note [1616303](http://help.sap.com).

**Storage System and Category**

Output control needs a defined storage system (content repository) to save the rendered form output as PDF.

To set up the storage system, choose the following navigation option:

<table>
<thead>
<tr>
<th>SAP Menu</th>
<th>SPRO ➤ Cross-Application Components ➤ Document Management ➤ General Data ➤ Settings for Storage Systems ➤ Maintain Storage System</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transaction Code</td>
<td>/nOAC0</td>
</tr>
</tbody>
</table>

You can set up the storage type which fits your needs, for example a SAP System Database, or a HTTP content server (such as fileserver, database, or external archive).

Once the storage system is available, you need to assign it to the predelivered storage category SOMU. To do so, choose the following navigation option:

<table>
<thead>
<tr>
<th>SAP Menu</th>
<th>SPRO ➤ Cross-Application Components ➤ Document Management ➤ General Data ➤ Settings for Storage Systems ➤ Maintain Storage Category</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transaction Code</td>
<td>/nOACT</td>
</tr>
</tbody>
</table>

Select category SOMU. For column *Document Area*, choose SOMU. For column *Content Repository*, choose the content repository you created in the previous step.

**Business Rule Framework plus (BRFplus)**
Output control uses BRFplus for the output parameter determination. Technically, BRFplus is based on WebDynpro applications. Therefore, you need to set up the according ICF services:

| /sap/bc/webdynpro/sap/fdt_wd_workbench | FDT Workbench |
| /sap/bc/webdynpro/sap/fdt_wd_object_manager | FDT Object Manager |
| /sap/bc/webdynpro/sap/fdt_wd_catalog_browser | FDT Catalog Browser |

For more information, enter the keyword *Active Services in SICF* at [http://help.sap.com](http://help.sap.com).

Once you’ve set up the services, download and install the required BRFplus applications from SAP Note 2248229.

Procedure:

1. Access transaction BRF+.
   If required, personalize your screen, and change the user mode from *Simple* to *Expert*.
3. On the *Business Rule Framework plus – XML Import* screen, under *File and Transport Request*, browse for the local *.xml* files you want to import. You can import the files one after the other.
4. In the *Customizing Request* field, enter an applicable Customizing Request ID.
5. Choose *Upload XML File*.
6. Choose *Back to Workbench*.

Adobe Document Services (ADS)

Applications in SAP S/4HANA ship default form templates implemented as PDF-based print forms with fragments. They require ADS for rendering. ADS is available as cloud solution or on-premise solution.

The cloud solution is a service provided on the HANA Cloud Platform. See SAP Note 2219598 for more information and links to the documentation for the new solution Form Service by Adobe.

For the on-premise solution, you need an AS Java installation (with *ADOBE* usage type) to run ADS.

ADS itself must have version 10.4 (1040.xxx) or higher. This version is delivered with SAP NetWeaver 7.3 EHP1 SP7 (and higher), NW 7.40 SP2 (and higher), and NW 7.50 (all SPs).

You do not necessarily need to use ADS, as output management also supports SAPscript and Smart Forms. However, special customizing is necessary for these two form technologies, and restrictions apply. For more information, see SAP Notes 2292539 and 2294198.

Printer Setup

Output control uses the short name of the printer (for example **LP01**), as defined in transaction **SPAD**.

Limitations

- Printing using the spool is not available in release S4CORE 1.00 SP00. If this is the case, please upgrade to S4CORE 1.00 SP01.
Currently, a PDF is always created for any kind of form. This has the following impact:

- Previewing the document from the spool request is only possible when the device type is PDF1 or PDFUC.
- Using another device type can lead to alignment issues for SAPscript and Smart Forms.
- Frontend output is not supported, since the output is processed via bgRFC.

Related Information

SAP Note 2228611

4.3.3 Follow-On Activities for the Conversion of Authorizations

You need to review your existing back-end PFCG role menus for obsolete transactions as well as for transaction code replacements. You can do this with the transaction SU25 report Exchange of obsolete transactions in role menu. For more information, see SAP Note 2465353.

If you plan to enable SAP Fiori UX, see Follow-On Activities for SAP Fiori UX Enablement (incl. Authorizations) [page 33].
4.3.4 Follow-On Activities for SAP Fiori UX Enablement (incl. Authorizations)

The following activities are relevant if you plan to enable SAP Fiori UX:

### Activities for Enabling SAP Fiori UX

<table>
<thead>
<tr>
<th>Activity</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Analyze SAP Fiori content with the help of the SAP Fiori Apps Library or with the SAP Readiness Check</td>
<td>SAP Fiori UX supports role-based content that includes new SAP Fiori Apps as well as classic UI technologies that are bundled in catalogs for authorization handling and in groups for structuring a user’s homepage in the SAP Fiori launchpad. SAP S/4HANA delivers business roles as examples for structuring your SAP Fiori content. Analyze the available SAP Fiori content in the SAP Fiori Apps Library. The SAP Fiori Apps Library also provides a self-service to get specific SAP Fiori app recommendations based on your system usage, see <a href="https://help.sap.com/viewer/p/SAP_FIORI_APPS_LIBRARY">SAP Fiori Apps Library</a> Get SAP Fiori App Recommendations. Alternatively, SAP Readiness Check for SAP S/4HANA recommends SAP Fiori apps based on your transaction usage history, see the section Recommended SAP Fiori Apps in the User Guide at <a href="https://help.sap.com/viewer/p/SAP_READINESS_CHECK">https://help.sap.com/viewer/p/SAP_READINESS_CHECK</a>.</td>
</tr>
<tr>
<td>Define your front-end catalogs for SAP Fiori</td>
<td>SAP provides templates for business catalogs that you can find in the SAP Fiori Apps Library. Check if the template catalogs fit your needs and then either adapt these front-end catalogs or create new catalogs for your requirements. Enrich them with relevant back-end transactions according to existing back-end roles. See also the section UI Content and Authorization Concept in the UI Technology Guide for SAP S/4HANA at <a href="http://help.sap.com/s4hana_op_1709">http://help.sap.com/s4hana_op_1709</a> Product Documentation. As prerequisite, you need to have done a replication of your back-end applications, see the section Replicate App Descriptors from Back-End System in the UI Technology Guide for SAP S/4HANA.</td>
</tr>
<tr>
<td>Activity</td>
<td>Description</td>
</tr>
<tr>
<td>----------</td>
<td>-------------</td>
</tr>
<tr>
<td>Define your front-end business role</td>
<td>SAP provides templates for business roles, which contain references to catalogs and groups. You may copy these business roles and adapt them to your needs. You need to assign relevant catalogs to front-end business roles to make the apps contained in a catalog available for user access from the SAP Fiori launchpad. In addition, you need to add the start authorizations for the activated OData services used by the apps contained in a catalog.</td>
</tr>
</tbody>
</table>
| Integrate SAP Fiori business catalogs into the back-end PFCG roles | To enable an integration of SAP Fiori front-end with the SAP S/4HANA back-end systems, you need to integrate the front-end catalogs (that are assigned to your front-end roles) into your existing back-end PFCG roles. This replicates the start authorization of the OData services for the apps in the catalogs to the role menu of the back-end PFCG roles. For more information, see:  
- *Function-Oriented View*  
- *UI Technologies in SAP NetWeaver*  
- *SAP Fiori Launchpad Administration Guide*  
- *Initial Setup of the Launchpad*  
- *Configuring Authorization Roles*  
- *Configuring Roles for Tile Catalogs and Groups*  
- *Configure Roles for Tile Catalogs* |
| Configure access to SAP Easy Access Menu and User Menu from SAP Fiori Launchpad | A starting point for the usage of SAP Fiori launchpad can be the access to SAP Easy Access Menu and User Menu from the connected back-end system. From these menus a user can populate the SAP Fiori launchpad homepage. This configuration enables access to existing back-end SAP Easy Access Menu and User menus.  
This is also an additional access option for users with dedicated SAP Fiori Launchpad content that was created on the front-end system. For more information, see [http://help.sap.com/s4hana_op_1709](http://help.sap.com/s4hana_op_1709)* SAP NetWeaver for SAP S/4HANA*  
- *Function-Oriented View*  
- *UI Technologies in SAP NetWeaver*  
- *SAP Fiori Launchpad Administration Guide*  
- *Setting Up Launchpad Content*  
- *Integrating Remote Content* |
4.3.5 Adapting the User Interface

Use

Key users can adapt the user interface (UI) of their apps at runtime in a modification-free way, for example, by adding, removing, or moving fields and groups. Runtime adaptation is supported for apps that use SmartForm controls with stable IDs. Note that you can only add fields which have been made available for this app. If you need additional fields, you have to create them as described under Creating Custom Fields and Custom Business Logic.

More Information

4.4 List of Application-Specific Follow-On Activities

The list below contains important application-specific follow-on steps and where to find their documentation.

Note

This list contains an overview of important steps you may need to do after the conversion process, but it is not complete. You find the complete list of conversion-relevant items in the Simplification Item Catalog, as explained in the overview [page 8].

App-Specific Follow-On Tasks

<table>
<thead>
<tr>
<th>Follow-On Tasks per Application Area</th>
<th>Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Finance</td>
<td>Documentation of Finance-related conversion tasks, see the SAP Note. SAP Note 2332030</td>

Hyperlinks

Some links are classified by an icon and/or a mouseover text. These links provide additional information.

About the icons:

- Links with the icon ⚠️: You are entering a Web site that is not hosted by SAP. By using such links, you agree (unless expressly stated otherwise in your agreements with SAP) to this:
  - The content of the linked-to site is not SAP documentation. You may not infer any product claims against SAP based on this information.
  - SAP does not agree or disagree with the content on the linked-to site, nor does SAP warrant the availability and correctness. SAP shall not be liable for any damages caused by the use of such content unless damages have been caused by SAP’s gross negligence or willful misconduct.
- Links with the icon 🌐: You are leaving the documentation for that particular SAP product or service and are entering a SAP-hosted Web site. By using such links, you agree that (unless expressly stated otherwise in your agreements with SAP) you may not infer any product claims against SAP based on this information.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP’s gross negligence or willful misconduct.

Gender-Related Language

We try not to use gender-specific word forms and formulations. As appropriate for context and readability, SAP may use masculine word forms to refer to all genders.
