Quick Start Guide

5 Steps to Unlock Data Management

This guide is your quick and easy reference to get going with Data Management in SAP Business Transformation Center.

Version 1.3
September 16, 2026

Step 1

Data Management is part of SAP Business Transformation Center, which is included in your SAP Cloud ALM subscription. Therefore, you need to subscribe to SAP Cloud ALM first.

Prerequisites:
You need to have an S-User with the role **Edit Cloud Data** in SAP for Me.

To submit the request:

1. Access the **Systems & Provisioning** dashboard in SAP for Me.
2. Under **Products Available for Provisioning**, find your entitlement for SAP Cloud ALM.
3. Choose **Start Provisioning** and follow the instructions.

You will receive an e-mail with a link to your enabled tenant, and you are almost good to go.

For more information, see:
How to get started with SAP Cloud ALM

Step 2

Have a look at the latest available information about Data Management.

Check out the following resources for the latest updates on features, FAQ and other considerations:

- Knowledge Base Article 3328319 - FAQ: SAP Business Transformation Center
- SAP Business Transformation Center Product Page on sap.com
- What's New for Data Management
- SAP Note 3762142 - Collective note for SAP Business Transformation Center - Data Management

Step 3

Configure authorizations and roles to access all features of Data Management.

You need to configure authorizations and roles for Data Management. A quick and easy explanation can be found in Accessing SAP Business Transformation Center.

Step 4

Connect to your productive or test source system

Connect to your productive or test source system.

Prerequisites:
Before connecting, make sure your source system meets the technical prerequisites. For more information, see Onboarding a New ABAP Source System.

> **Note:**
> Make sure that SAP_APPL 617 (enhancement package 7 for SAP ERP 6.0) and ST-PI 740 (support package level 0024 or higher) are installed in your source SAP ERP system.

Use the Landscape Management Service (LMS) to connect to your source system. You can connect to either your productive SAP ERP system or a test system. This is required before you can use Data Management.

Step 5

You are now ready to use Data Management in SAP Business Transformation Center.

Congratulations! You are now ready to go.
Data Management consists of three apps that you work through in sequence:
Manage Data Assessments → Manage Runs → Analyze Data Quality
To get started, see Data Management.
Make sure to check back regularly for further feature updates and latest news around Data Management in SAP Business Transformation Center.
If you need support on the go, you can:

- Use the In-App Help functionality in the upper right corner of each app.
- Create a customer case using our dedicated component CA-BDT.

Make sure to check the SAP Roadmap Explorer for the latest information about planned features and functionalities.
