SAP Spend Analysis and Insights

SAP Spend Analysis and Insights provides users with the ability to see across all spend to help uncover cost-saving opportunities and discover process improvements. All of the spend data is rationalized in a unified data model as part of our next-generation data lake.

The SAP Spend Analysis and Insights solution provides the following features and functions:

- **Dashboards:**
 - Configurable, intuitive spend dashboards for executives and business users with visibility into suppliers, spend taxonomy, plant or company site, and business units
 - Ability to select either UNSPSC taxonomy or a custom taxonomy hierarchy to classify all spend across the company
 - Ability to identify savings, compliance, and efficiency opportunities through detailed spend analysis and compliance dashboards
 - Ability to review data completeness and quality using Data Quality dashboards
 - Ability to review enrichment via spend categorization and supplier enrichment dashboard
 - Preconfigured multi-currency and multi-language support in the application
- **Spend Classification and Supplier Enrichment:**
 - Automated AI-ML enabled spend classification engine with daily refreshes
 - Customer-specific model trained on company's unique purchasing patterns after initial enrichment process
 - SAP's human audit team reviews the predictions to ensure accuracy of classifications on the top 95% of spend
 - Human-in-the loop to provide feedback on classifications that are then used for future predictions
 - Strategic rule-based supplier matching based upon Dun & Bradstreet data for invoices with the ability to provide alternate supplier selections
 - Legal ownership hierarchy (Global Ultimate) and diversity information for matched records
- **Data Sources:**
 - Predelivered, automated connectors for SAP S/4HANA Private Cloud application (2023+)

Document History

The following table provides an overview of changes to this document.

Version	Date	Description
2605	2026-06-10	First version

About This Document

This feature scope description shows you which features are provided with SAP Spend Analysis and Insights. In addition, it constitutes the product documentation for SAP Spend Analysis and Insights, as defined in the General Terms and Conditions for SAP Software ("GTC").

Licenses

Note that you may need a separate subscription license for certain features. Please contact your SAP Account Executive for further information.

Key Features

The following table explains the key features available:

Key Feature	Use
View Dashboards	SAP Spend Analysis and Insights includes pre-delivered dashboards that enable users to analyze their enterprise spend that is enriched and aggregated to a single category taxonomy and identify savings and compliance opportunities. The users can filter the data by multiple dimensions like Source System, Supplier, Category, Regions, Plant/Site. The dashboard surfaces significant, actionable, and relevant user content based upon user-roles and data access policies assigned to the user. The dashboards support multi-currency and multi-language based upon the user profile settings in the dashboard tool.
Manage direct connection to the SAP S/4HANA Cloud Private Edition systems	For SAP Spend Analysis and Insights, data can be loaded from SAP S/4HANA Cloud Private Edition. The source data are delivered to Business Data Cloud using automated processes. The following data for SAP S/4HANA Cloud Private Edition are used: • Transaction Data • Invoice (GL Line item) • Purchase Orders • Contract • Master data • Fiscal Year • Account (General Ledger) and Account Text • Plant (Company Site) • Product Group (aka Material Group) • Product (also known as Material or Part) • Supplier • Purchasing Org • Purchasing Group • Cost Center • Profit Center • Currency Conversion Table (TCURR) • User

Key Feature	Use
Manage File Loads	SAP Spend Analysis and Insights automates the load of data from SAP S/4HANA Cloud Private Edition (version 2023+). The recommended timeframe for the accounts payable data from any system is two years. The recommended timeframe for the accounts payable data from any system is two years, although customers can load more records as needed. The refresh cycle for the loads is automated and is near-real time. SAP Spend Analysis and Insights provides a Data Quality dashboard for data validation.
Data Enrichment	SAP Spend Analysis and Insights provides the following enrichment services to help aggregate data across multiple source systems for display in dashboards and reports. • Spend Categorization to UNSPSC or Custom Taxonomy: Spend Classification of General Ledger line items is delivered for USPSC (version 25) or a custom taxonomy (uploaded by user) hierarchies. The process uses a machine learning model with labeled data. • Supplier Matching to Dun & Bradstreet (D&B): System utilizes supplier matching evaluations to predict the D&B global and site-level supplier hierarchy from information uploaded about the supplier such as name, location, and industry. The enriched supplier also has a cleansed address, Global Ultimate identification, and diversity information (for US suppliers). • Customer Feedback Tool: System provides an interactive tool that allows users to review the invoice categorization and supplier match predictions, especially the lower confidence ones. Users can determine alternate UNSPSC and D&B supplier matches against aggregated data. These values are then utilized to retrain customer-specific models based on their unique purchasing patterns.

Important Disclaimers and Legal Information

Hyperlinks

Some links are classified by an icon and/or a mouseover text. These links provide additional information.

About the icons:

- Links with the icon  : You are entering a Web site that is not hosted by SAP. By using such links, you agree (unless expressly stated otherwise in your agreements with SAP) to this:

Videos Hosted on External Platforms

Some videos may point to third-party video hosting platforms. SAP cannot guarantee the future availability of videos stored on these platforms. Furthermore, any advertisements or other content hosted on these platforms (for example, suggested videos or by navigating to other videos hosted on the same site), are not within the control or responsibility of SAP.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

Bias-Free Language

SAP supports a culture of diversity and inclusion. Whenever possible, we use unbiased language in our documentation to refer to people of all cultures, ethnicities, genders, and abilities.
