2 Introduction

SAP Integrated Product Development is a cloud solution that enables you to digitally orchestrate your product development, from design to operate, resulting in reduced time to market, higher R&D return on investment, higher margins, and reliable product launches.

SAP Integrated Product Development comprises multiple SaaS applications that each group related features in the product lifecycle process.

3 About This Document

This feature scope description shows you which features are provided with SAP Integrated Product Development.

In addition, it constitutes the product documentation for SAP Integrated Product Development, as defined in the General Terms and Conditions for SAP Software ("GTC").

Licenses

Note that you may need a separate subscription license for certain features. Please contact your SAP Account Executive for further information.

Integration

SAP Integrated Product Development supports integration with other SAP or non-SAP products. Note the following:

- Other products mentioned in this feature scope description might have their own product lifecycle, their own localization versions, or their own language scope, and are therefore named only as an example or as currently integrated.
- Integration with other products might be subject to a change with the next release of SAP Integrated Product Development.
- You might need an additional license for other products.

For further information, please contact your SAP Account Executive.

4 SAP Integrated Product Development Features by SaaS Application

SAP Integrated Product Development provides features in the cloud for managing the lifecycle of your products. Each SaaS application provided by SAP Integrated Product Development groups the features that are related to specific tasks or phases in the lifecycle process of your products.

4.1 Change Management

Introduction

A SaaS application of SAP Integrated Product Development that provides an integrated solution for systematically managing product changes. This approach ensures traceability, transparency, and efficiency throughout the product lifecycle.

Feature	Description
Manage Change Numbers	Change Numbers serve as unique identifiers for specific changes across various objects used by multiple SaaS application within SAP Integrated Product Development.
Configure Change Types	Customize change types to align with your organization's processes. Define and tailor fields, statuses, and workflows to capture and manage relevant information for each change type.

4.2 Collaboration

Introduction

A SaaS application of SAP Integrated Product Development that allows you to instantly collaborate with participants, within and outside your organization, to accelerate product innovation.

Feature	Description
Collaboration	Create and use virtual spaces to collaborate with people in your organization, and across your extended enterprise.
Document Collaboration	Store, share, and review engineering documents in collaborations. Manage document versions by creating one or more versions for the base version of a file.
Collaborate with Participants	Invite participants to collaborations, where participants are your stakeholders such as original equipment manufacturers (OEMs) and business partners, internal or external to your organization.
Workflow-based Collaboration	Add workflows to collaborate using a process driven approach to facilitate easier communication between stakeholders. Use an integrated inbox to process work items and make business decisions.
Product Data Collaboration	Collaborate on product data such as bills of material (BOM) and order BOM, and enable internal and external stakeholders to propose changes using redlining.
Specification Exchange	Collaborate on provisional specifications with your suppliers to shorten the time until a new or updated specification can enter the system.
Transfer data (currently, using Product Package Exchange)	Enables users to work with product data from an external data source (currently, SAP ERP). This includes, for example: <ul style="list-style-type: none"> • Redlining • Downloading data • Working on the data in collaborations
Process visibility capability within the SAP Workflow Management service	Build workflow-based business scenarios (currently using Process Visibility) to gain end-to-end visibility of their statuses and to follow up on real-time events.

4.3 Configuration Management

Introduction

Configuration Management is a SaaS application provided by SAP Integrated Product Development. It helps the configuration manager to create and maintain configuration plans, lifecycle phases, and baselines.

Feature	Description
Maintain configuration plans	Create and maintain configuration plans.
Create and manage lifecycle phases	Create and manage lifecycle phases within a configuration plan.

Feature	Description
Create and assign baselines	Create and assign a baseline to a lifecycle phase.
Maintain baselines	<p>Create, delete, and update baselines for multilevel product structures (engineering/design or production), which can be synchronized from a source system.</p> <p>The data for the controlled objects can come from an external system (currently, SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP) or from within SAP Integrated Product Development.</p>
History	View the change log of a configuration plan or a baseline.
Attachments	Attach files to configuration plans and baselines.
Pull master data objects	Assign relevant objects that describe the products in the respective phases: product, routing, product structure, and document information including originals.
Manage statuses	Manage the status of a configuration plan, a lifecycle phase, or a baseline.
Export lists	Export the configuration plan or baseline list view as a spreadsheet.
Add comments	Add comments to configuration plans and baselines.
Navigation to view 3D models of parts and assemblies	Navigate to the Visualization and Enterprise Product Structure SaaS applications to view 3D models of parts or assemblies.
Configure baselines and configuration plans	Create, edit, and copy baseline profiles as well as lifecycle phase templates to improve standardization.
Integration with an external data source	Read certain change management, bill of material, document, plant, routing, and product data from an integrated external data source (currently SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP).
Intelligent Handover integration	Use an existing baseline to load the source structure of the handover for planning and create a new baseline of the MBOM and routing that result from your planning activities.
Collaboration integration	Assign a baseline as a reference object to a collaboration.

4.4 Engineering

Introduction

With the Engineering SaaS application, you can effectively incorporate the experience data related to products and their users, thus consolidating the true voice of the customer into products.

The Engineering SaaS application provided by SAP Integrated Product Development enables you to use the following functions:

Feature	Description
Requirements-Driven Development	<ul style="list-style-type: none">• Manage requirements by creating requirements models.• Assign requirements and other model objects to external business objects to support requirements traceability. Requirements traceability enables you to manage the relationships between the requirements and the associated objects in your development.• Run impact and lineage analysis - You can launch an impact and lineage analysis on requirements, model objects and other associated business objects.• Edit one requirement model concurrently.• Check requirements quality, retrieve suggestions, and configure rules for checking.• Use the traceability view to create and maintain traceability links for requirements and SysML block definition diagrams.
Standard-Based Requirements Exchange	<p>This feature enables you to transport requirements between different requirements management tools. You can:</p> <ul style="list-style-type: none">• Import and export requirements using a Requirements Interchange Format file.• Import requirements and associated information from a text file.

Feature	Description
Model-Based Systems Engineering	<ul style="list-style-type: none"> • Use requirement diagrams to visualize the hierarchy and other relationships between all or some of your requirements. • Use block definition diagrams to design and analyze system structures. • Use use case diagrams to describe the usage of a system by providing a graphical view of how actors interact with the system to achieve their goals. • Use internal block diagrams to specify the internal structure of a single block in your system model. • Use parametric diagrams to convey the constraints information of your system. • Use state machine diagrams to specify how a system or sub-system changes its state over time in response to different events. • Use activity diagrams to review and analyze the behaviors of a system by describing actions and flows involved in its activities. • Use sequence diagrams to describe system behaviors by modeling the interactions between the participants (systems, sub-systems, and actors in the associated environment). • Use package diagrams to describe the relationships between packages in a model. • Use variant management models to create product variants.
Test Management	<ul style="list-style-type: none"> • Check test cases coverage. • Create and manage test artifacts. • Plan and execute tests against product requirements. • Analyze test results and stay connected with product development.

4.5 Enterprise Product Structure

Introduction

The Enterprise Product Structure SaaS application provided by SAP Integrated Product Development lets you synchronize product and its details from an external system (currently, for example, SAP S/4HANA or SAP ERP) to SAP Integrated Product Development. Additionally, you can manage various product versions created at key points in the product lifecycle.

Feature	Description
View Product Structure	<p>View an expanded product structure and its components for a specific validity.</p> <p>You can also add an image as a thumbnail for a product version.</p>
Creation and Management of Product Structures	<p>Create and manage product structure for configurable products, which includes defining its various components like modules, variation points, variants, and products. Additionally, you can define product configurations by selecting the relevant variants using the variant matrix or parameter effectivity mechanism.</p> <p>Variant Matrix lets you define a product configuration by selection in a matrix. Parameter effectivity allows you to use provided parameter values to control the configuration through the evaluation of simple expressions assigned to a module or variant.</p>
Navigation	<p>Browse the folder hierarchy of products to find a product and view its BOM structures and other details.</p>
Search	<p>Find a specific product structure and its details by using search filters, such as folder name, product ID, product type, change number, revision, and so on.</p>
Import and storage	<p>Import selected product structures into SAP Integrated Product Development to make product structures available on the cloud.</p>
Management of folder hierarchy	<p>Organize products into a folder hierarchy for easy access.</p>
Product Versioning	<p>Manage and track versioning of products throughout their product lifecycle. When synchronizing with an external source system, a new product version is created with each revision change while retaining the permanent record of the state of the older product versions.</p>
BOM Versioning	<p>Manage and track BOM versioning from its new BOM version. When synchronizing with SAP S/4HANA systems, a new BOM version is created with an engineering change number.</p>

Feature	Description
Integration with Visualization SaaS application	<p>Generate a 3D model and thumbnails for CAD parts.</p> <p>When viewing a BOM explosion, you can dynamically generate a 3D model from the BOM explosion to allow for visual navigation of the BOM in a 3D model. The Visualization integration also offers a bidirectional selection that lets you select a component by clicking in either the product structure tree or in the 3D viewport.</p> <p>Toolbar with options like measurement tool, pan, cross section, and so on, are also available for users.</p>
Integration with Collaboration SaaS application	<p>The integration with CollaborationSaaS application allows you to assign a product version to a collaboration.</p> <p>Once a product version is assigned to a collaboration, the members of that collaboration can reference the product version from the Collaboration SaaS application.</p>
Integration with Product Data Integration SaaS application	<p>The integration allows Product Data Integration users to publish design items and their structures to Enterprise Product Structure as early products and BOMs.</p>
Integration with an external data source, currently SAP S/4HANA, SAP ERP, SAP S/4HANA Cloud Private Edition, or SAP S/4HANA Cloud Public Edition	<p>Read certain change management, BOM, document, plant, and product data from an integrated external data source.</p>
Log Changes	<p>Configure whether logs are written for changes to products and product structures. View the changes and who changed what and when.</p>
User access management for products and product structure folders	<p>Create authorization contexts to control access to products and product structures. Users and user groups added to the authorization contexts can then access all the product structures within that folder.</p>

4.6 Formulation

Introduction

With the Formulation SaaS application within SAP Integrated Product Development, you can create recipes tailored to your business needs by incorporating information about input items, components, and the processes to be carried out.

Feature	Description
Manage recipes	<ul style="list-style-type: none"> • Create and maintain recipes. • Create recipe alternatives and versions. • Create plant-dependent recipes. • Review the calculated data related to a recipe output. • Review the results of quantitative/qualitative calculations based on the specified country/region validity. • Transfer recipe calculation results to the primary output specification. • Upload documents and product image thumbnails to recipes.
Develop and maintain formulas	<ul style="list-style-type: none"> • Create and update recipe formulas. • Create a primary output specification directly within a recipe. • Define the function of input and output items within a recipe formula. • Review how formula items contribute to the recipe's primary output. • Scale formula item quantities based on the quantity of a specific formula item.
Manage statuses	<ul style="list-style-type: none"> • Define a status profile, which is a set of sequential lifecycle statuses. • Assign that status profile to a certain recipe type. • Based on the status profile assigned to the recipe type, specify statuses for a recipe.
Leverage product master data	Specify the related product masters for specifications in the recipe formula.
Collaborate on recipes with internal colleagues	Assign recipes to collaborations, allowing people within your organization to collaborate on the same recipes.
Configure recipe types	Create and maintain recipe types to differentiate recipes according to business purposes and control recipe behavior.
Configure formula calculations	Create and configure additional intraformula calculations to ensure the accurate formulation of products.
Configure recipe calculations	Create and configure recipe calculations related to the primary output.
Configure component types usage in recipe formulas	<ul style="list-style-type: none"> • Define how component types will be used for input and output items within a recipe formula. • Exclude component types from recipe calculations.

4.7 Product Data Integration

Seamlessly upload, download, and transfer product data between external non-SAP authoring systems and SAP Integrated Product Development. This tool is essential for efficient collaboration and creating product structures, making it easier to manage and utilize data from various sources.

Introduction

The Product Data Integration SaaS application lets you integrate data from external non-SAP authoring systems (for example, mechanical CAD) as the vital source of product data to SAP Integrated Product Development.

Feature	Description
Upload data	Import metadata, structures, and files from external non-SAP authoring systems that you have connected to SAP Integrated Product Development.
Retrieve data	Read metadata and structures in SAP Integrated Product Development and download the corresponding files to external non-SAP authoring systems that you have connected to SAP Integrated Product Development.
Derive product structures from uploaded data	Derive product structures from uploaded data for use in the Enterprise Product Structure SaaS application.
Configure data model settings	Adjust data model settings in SAP Integrated Product Development.

4.8 Insights

Introduction

The Insights SaaS application for SAP Integrated Product Development enables you to access and analyze product-related information, so that you can make smarter business-related decisions and get your work done faster.

Feature	Description
Quick access to product-related information for analysis and decision-making	<p>Central access point (using SAP Build Work Zone, standard edition or SAP Build Work Zone, advanced edition) to access the following:</p> <ul style="list-style-type: none"> • Objects, for example, collaborations, that need attention • Consolidated information that is related, for example, to a product's lifecycle
Insights into change management processes	View graphical representations of aggregated change record data from an external data source (currently, SAP S/4HANA Cloud Private Edition, SAP S/4HANA, or SAP S/4HANA Cloud Public Edition).
Insights into your collaborations	Get quick access to aggregated information about the collaborations that you participate in.
Insights into your product innovations	Get quick access to aggregated information about ideas in your campaigns.
Insights into your products	Get quick access to information about the products that you are working on.
Insights into your requirements	Get quick access to aggregated information about the requirements models that you are working with and their requirements.
Insights into your visualizations	Get quick access to information about the visualizations that you are working on.

4.9 Intelligent Handover

Introduction

A SaaS application of SAP Integrated Product Development that allows you to plan and initiate handover of data from the source structure to the target structure in the product lifecycle management process.

Hand Over Engineering Bills of Material (EBOM)

As a production engineer, you can derive and maintain the manufacturing bill of material (MBOM) as the target from the engineering bill of material (EBOM) as the source and assign routing to the MBOM.

Feature	Description
Integration with an external data source (SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP)	<ul style="list-style-type: none"> Search and filter of BOMs from an integrated external data source. Load the source BOMs and publish the target BOMs to the integrated external data source.
Support fabricated planning	Modify or make up components from their original state to another; for example, BOM items changed to BOM assembly in the MBOM.
Initiate handover activity	Derive or create an MBOM for a specific target plant from the source EBOM.
Load source BOM structure	Expand the source BOM in a multilevel hierarchy and manage the handover activity of the BOMs.
Plan for multilevel target MBOMs	Create multilevel target MBOMs in the external data source (SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP) on completion of planning of the target MBOM.
Incorporate changes	Compare and incorporate the changes initiated in the EBOM to the MBOM using the change incorporation function.
Edit BOM details	Maintain the values for a subset of BOM item attributes.
Add BOM items	Add BOM items by searching for the materials present in the external data source (SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP).
Planning target BOM items	<ul style="list-style-type: none"> Drag and drop the components from the source BOM to the target BOM. Simulate the source structure as the target structure (plan as designed). Select and plan the components from the source to create the target MBOM structure. Restructure the BOMs in the planned target.
Monitor tasks	Monitor the backend requests (tasks) that are related to the handovers.
Integration to Configuration Management	Support handover of baseline objects.
Production version preparation	Plan process-oriented handovers using routings.
Support of visualizations	<ul style="list-style-type: none"> Plan handover using 3D visuals. Highlight the visual components based on node selection in the BOM structure (source and target). View 3D visuals of the planned and unplanned components.

Hand Over Recipe Formulations to Bills of Material (BOM)

As a production engineer, you can derive and maintain the bill of material (BOM) as the target from the SAP Integrated Product Development (SAP IPD) recipe formulation.

Feature	Description
Integration with an external data source (SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP)	Load the SAP IPD recipe formulation (source recipe) and to derive the target BOMs and publish it to the integrated external data source.
Initiate handover activity	Derive or create a BOM for a specific target plant from the source recipe.
Incorporate changes	Compare and incorporate the changes initiated in the source recipe to the BOM using the change incorporation function.
Edit BOM details	Maintain the values for a subset of BOM item attributes.
Planning target BOM items	<ul style="list-style-type: none">• Select and plan the ingredients from the source to create the target BOM.• Plan all the ingredients from the source recipe to the target BOM at once using the plan all ingredients option.
Highlight	Check the placement of the selected ingredient in the <i>Target</i> Panel and component in the <i>Source</i> panel

4.10 Product Innovation Management

Introduction

With the Product Innovation Management SaaS application for SAP Integrated Product Development, you can have a streamlined process for managing ideas and campaigns.

Feature	Description
Submit Ideas for Campaigns	<ul style="list-style-type: none">• Submit ideas for a campaign• Vote on ideas• Comment on ideas• Invite idea coauthors

Feature	Description
Manage Campaigns	<ul style="list-style-type: none"> • Set up a campaign • Assign idea submitters to submit ideas • Manage all the ideas and categorize ideas by tags • Move ideas to another campaign • View the edit history of ideas • Assign experts to review and evaluate ideas • Send email notifications to campaign managers, submitters and experts • Create needs based on ideas • Create requirements based on needs, and link needs to requirements • Create items in external project management tools (currently, Jira software) based on needs, and link needs to the items
Evaluate and Score Ideas	<ul style="list-style-type: none"> • Evaluate and score assigned ideas • Vote on ideas • Comment on ideas
Perform Settings	<ul style="list-style-type: none"> • Define questionnaires • Define phases • Define tags • Define additional idea fields

4.11 Specification Management

Introduction

With the Specification Management SaaS application for SAP Integrated Product Development, you can manage the diverse range of data that represents your product and collect the various parameters that define it. Specification Management allows you to manage product-relevant information such as raw materials, semifinished goods, and packaging, and to make sure they're stored in a structured, secure way.

Feature	Description
Manage specifications	<p>Create, update, delete, and version specifications.</p> <p>Create specification copies.</p> <p>Create specification types that determine the properties of a specification.</p> <p>Categorize specifications according to product category.</p> <p>Use status profiles for specifications defined in Status Management.</p> <p>Update the status of multiple specifications at a time.</p> <p>Upload documents and product image thumbnails to specifications.</p>
Configure and manage properties and compositions	<p>Define and group properties in multi-level property trees, and assign them to specification types.</p> <p>Add a standard list of values to properties, such as units of measure, dimensions, minimum and maximum values.</p> <p>Define properties in various languages, and based on validity.</p> <p>Define attribute or composition properties as mandatory for specification types.</p> <p>Group composition items by composition item groups, and classify them by composition item types.</p> <p>Define additional custom columns for a composition property.</p>
Categorize products	<p>Assign a product category to specifications.</p> <p>Categorize products according to industry standards, line of business, or customer-specific grouping.</p> <p>Define a hierarchical product category structure.</p> <p>Add properties to product categories.</p> <p>Filter property trees in specifications by product category to only display relevant properties.</p>
Manage units of measure and value qualifiers	<p>Maintain value qualifiers for composition items in the specification, such as measured, certified, warning, etc.</p> <p>Use Unit of Measure and dimensions to accurately describe and interpret property information about products and substances in a variety of ways.</p>

Feature	Description
Manage phrases	<p>Define phrases with multiple translations.</p> <p>Define phrase collections.</p> <p>Assign the phrases to phrase collections, so that the collections can be used in character-based properties.</p> <p>Import phrases and phrase collections using Microsoft Excel.</p>
Manage statuses	<p>Define a status profile, which is a set of sequential lifecycle statuses.</p> <p>Assign that status profile to a certain specification type.</p>
Define authorization contexts	<p>Create authorization contexts to control access to specifications. Users and user groups added to them can then access specifications only with certain product categories, specification types, specification versions, and properties.</p> <p>Fine-tune what users and user groups can do when accessing specifications by choosing whether they are authorized to create, read, update, delete, or create new versions.</p>
Read product master	<p>Read product masters from an external data source (currently, SAP ERP, SAP S/4HANA, SAP S/4HANA Cloud Private Edition, or SAP S/4HANA Cloud Public Edition), and assign them to specifications.</p>
Find and compare specifications	<p>Search for specifications based on properties and header fields.</p> <p>Compare attribute properties of multiple specifications.</p>
Provide access to specification data via public APIs	<p>The following public APIs are available to retrieve data:</p> <ul style="list-style-type: none"> • Read phrases • Read specification type configuration • Read property configuration • Read composition item configuration • Read specification versions <p>The Specification API also enables the user to create new specification versions, and you can also use APIs to create and delete product master assignments</p>

4.12 Visualization

Introduction

The Visualization SaaS application provided by SAP Integrated Product Development is a bundle of services and applications for working with 2D and 3D visualizations. Visualizations include 2D images and drawings, and 3D models and photos.

The services enable cloud storage and publishing of the data for use in different contexts, as well as creation of automated business workflows around the data.

The applications allow efficient importing of visualizations by end-users, and enrichment of the content with business relevant information to drive valuable user interactions with the data.

Feature	Description
Delivery	<ul style="list-style-type: none">• Browse content• View visualization content
Visual Navigation	View visual content and navigate between views, or between different visualizations. Users can also navigate to third-party applications.
Visual Analytics	View visual content and analyse business data connected to visualization parts. The business data can come from third party services as well.
Conversion and Storage	Import files in supported formats, enabling advanced cloud-content creation and cloud-based capabilities such as: <ul style="list-style-type: none">• Streaming: Rendering occurs while visualization data is being retrieved, providing a usable visual representation while data is still being loaded.• Client-side filtering: Only the data needed in a particular viewing context is retrieved.• Undoable modifications to visualization data.

Feature	Description
Association	<p>Associate visualizations and objects within visualizations with business data from external applications.</p> <p>Business data association enables visual navigation of business data and integration with external applications. This allows visually enabled solutions for scenarios such as:</p> <ul style="list-style-type: none"> • Ordering of spare parts • Manufacturing • Performance monitoring
Enrichment	<p>Add rich content to visualizations to enable consumption in scenarios such as :</p> <ul style="list-style-type: none"> • Work instructions for manufacturing or maintenance • Marketing materials • Configurators for Build to Order • Service manuals

4.13 Cross-Product Features

Some cross-product features are relevant for several SaaS applications. These cross-product features include the following:

Feature	Description
Product Cockpit	<div style="border: 1px solid #ccc; background-color: #f9f9f9; padding: 10px; margin-bottom: 10px;"> <p>Note</p> <p>These features are only available to customers who subscribed to this SaaS application before February 5, 2024. For more information, contact your SAP Account Executive.</p> </div> <p>Get an overview of product development information. This information includes requirements, product feedback, test cases, 3D models, and data from other systems.</p>

Feature	Description
Common Functions	<p>Make central configuration settings, related to the following:</p> <ul style="list-style-type: none"> • Management of teams • User setup based on default role collections • Import plants from a source system (currently, SAP S/4HANA Cloud Private Edition, SAP S/4HANA, SAP S/4HANA Cloud Public Edition, or SAP ERP) • Use authorization contexts to control user access to objects based on their statuses
Status Management	<p>Set the current processing status of objects to ensure that they are processed accordingly</p>
Intelligent Support Services	<p>Integrate with intelligent support services (currently, Built-In Support) to assist users with embedded access to support without leaving the current application.</p> <p>This integration is currently provided for the following SaaS applications:</p> <ul style="list-style-type: none"> • Common Functions • Configuration Management • Test management applications within Engineering • Product Innovation Management
Digital Assistance	<p>Integrate with a digital assistant (currently, Joule), which provides users with guidance that is based on the content provided by the SAP Help Portal.</p>

Important Disclaimers and Legal Information

Hyperlinks

Some links are classified by an icon and/or a mouseover text. These links provide additional information.

About the icons:

- Links with the icon : You are entering a Web site that is not hosted by SAP. By using such links, you agree (unless expressly stated otherwise in your agreements with SAP) to this:
 - The content of the linked-to site is not SAP documentation. You may not infer any product claims against SAP based on this information.
 - SAP does not agree or disagree with the content on the linked-to site, nor does SAP warrant the availability and correctness. SAP shall not be liable for any damages caused by the use of such content unless damages have been caused by SAP's gross negligence or willful misconduct.
- Links with the icon : You are leaving the documentation for that particular SAP product or service and are entering an SAP-hosted Web site. By using such links, you agree that (unless expressly stated otherwise in your agreements with SAP) you may not infer any product claims against SAP based on this information.

Videos Hosted on External Platforms

Some videos may point to third-party video hosting platforms. SAP cannot guarantee the future availability of videos stored on these platforms. Furthermore, any advertisements or other content hosted on these platforms (for example, suggested videos or by navigating to other videos hosted on the same site), are not within the control or responsibility of SAP.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

Bias-Free Language

SAP supports a culture of diversity and inclusion. Whenever possible, we use unbiased language in our documentation to refer to people of all cultures, ethnicities, genders, and abilities.

No part of this publication may be reproduced or transmitted in any form or for any purpose without the express permission of SAP SE or an SAP affiliate company. The information contained herein may be changed without prior notice.

Some software products marketed by SAP SE and its distributors contain proprietary software components of other software vendors. National product specifications may vary.

These materials are provided by SAP SE or an SAP affiliate company for informational purposes only, without representation or warranty of any kind, and SAP or its affiliated companies shall not be liable for errors or omissions with respect to the materials. The only warranties for SAP or SAP affiliate company products and services are those that are set forth in the express warranty statements accompanying such products and services, if any. Nothing herein should be construed as constituting an additional warranty.

SAP and other SAP products and services mentioned herein as well as their respective logos are trademarks or registered trademarks of SAP SE (or an SAP affiliate company) in Germany and other countries. All other product and service names mentioned are the trademarks of their respective companies.

Please see <https://www.sap.com/about/legal/trademark.html> for additional trademark information and notices.
