Installing SAP Crystal Reports 2011

1.1 To download the installation program

1. Go to <https://service.sap.com/bosap-support> > **Software Downloads**.
2. On the "Find your software" tab, under the "A–Z Index", select **Installations and Upgrades**.
3. Select **C > CRYSTAL REPORTS > CRYSTAL REPORTS 2011**.
4. Select **Installation and Upgrade > WINDOWS**.
5. Select the object titled "SAP Crystal Reports 2011 <version> Windows (32B)", and then follow the instructions on the website to download and extract the objects.

Note:

The software may take a long time to download, and you may need to contact the system administrator to ensure that your company's firewall will not terminate the download process.

Support Packages and Patches are installation programs that contain updates to SAP Crystal Reports. You can download them from <https://service.sap.com/bosap-support>. On the "Find your software" tab, under the "A–Z Index", click **Support Packages and Patches**. For more information on installing Support Packages and Patches, see "Customizing Support Packages and Patches".

1.2 Installation overview

The SAP Crystal Reports 2011 (Crystal Reports) Installation Wizard works with Microsoft Windows Installer to guide you through the installation process. The Installation Wizard automatically recognizes your operating system and updates files as required.

Note:

- Although SAP Crystal Reports 2011 is supported on 64-bit operating systems, it is only available as a 32-bit application.
- When installing a database driver for Crystal Reports on 64-bit operating systems, ensure that you install the 32-bit version. A 32-bit application cannot use a 64-bit driver.
- In order for the Crystal Reports SAP BW Toolbar to work, SAP GUI and Business Explorer must be installed before Crystal Reports is installed. If you installed Crystal Reports before SAP GUI and Business Explorer, do the following to enable the SAP BW Toolbar:

1. Go to *BOE Install Path\SAP BusinessObjects Enterprise XI 4.0\win32_x86*

2. Run `regsvr32 CrystalExtension.dll`

A message should appear stating that `CrystalExtension.dll` has registered successfully.

3. Run `BWQueryReportWrapper.exe /regServer`

For information about installation requirements, refer to the Supported Platforms document available on the SAP BusinessObjects Enterprise support site: <http://www.sdn.sap.com/irj/boc/articles>

1.3 Installing SAP Crystal Reports

You must have Administrator privileges on the computer that you plan to install Crystal Reports on. The installation process creates registry entries and may update some system files that require Administrator rights.

Note:

If your network Administrator has copied the Crystal Reports installation files to the network, make sure that you have been given read privileges on that network.

Close all programs currently running, and stop as many services as possible when installing Crystal Reports.

1.3.1 To install SAP Crystal Reports

Before installing, ensure that the account being used has Administrator privileges. The installation requires that the account being used is a member of the Windows *Administrators* group, and that the default privileges assigned to the *Administrators* group have not been modified.

When the installation program starts, a series of prerequisite checks are performed. The result of this test is displayed for your information. If your system does not meet the minimum requirements, the installation program will not install Crystal Reports.

1. Locate the installation program. If you are installing from a physical media, look for `setup.exe` in the top-level folder. If you are installing from a compressed download, extract it and locate `setup.exe`.

Note:

Depending on your system configuration, a dialog box may appear, informing you to update existing files. If this happens, click **Yes** and restart your machine. The Installation Wizard updates the required files.

2. Run `setup.exe` by double-clicking it in Windows Explorer or calling it from the command-line.
3. Choose a language for the setup program to use during the installation process.
4. Review the prerequisites dialog box; if everything is correct, click **Next**.
5. When the "Welcome" dialog box appears, click **Next**.

6. Read and accept the license agreement, and then click **Next**.
7. Verify that the destination folder is correct, and then click **Next**.

Tip:

You can click **Browse** to select a different destination folder.

Note:

If you have already installed other SAP BusinessObjects software, you cannot change the destination folder.

8. Fill in the "Full Name", "Organization", and "Product Keycode" information and then click **Next**.

Tip:

You may need to contact your Administrator for the product activation keycode.

9. In the "Choose Language Packs" dialog box, select the languages that you want to install, and then click **Next**.

Note:

You cannot install additional language packs after you have installed the software. If you need additional language support, you must uninstall the product and reinstall it with the required language packs.

The "Choose Install Type" dialog box appears.

10. Choose the type of installation that you want to perform:

- **Typical**

Installs the most common application features.

- **Custom**

Lets you choose the features that you want installed, specify where they will be installed, and check the disk space required by each feature. If you choose **Custom**, the "Select Features" dialog box appears.

- a. Select the features you want to install.

If the check box contains...	the following occurs
a checkmark	The feature and all its subfeatures will be installed.
a shaded square	The feature and some of its subfeatures will be installed.
an empty square	The feature or subfeature is either unavailable or will not be installed.

- b. Click **Next**.

The "Web Update Service Option" dialog box appears.

- c. Choose whether to disable the update service.

Note:

If you disable the update service, you will need to manually check for updates to your software.

11. Click *Next*.

The "Start Installation" dialog box appears.

12. Click *Next*.

The installation process begins.

13. Click *Finish* to complete the installation.

1.4 Silent installations

A silent installation is one that you can run either from the command line, or by using a response file to automatically install Crystal Reports on any machine in your system, without the installation program prompting for information during the installation.

The silent installation is particularly useful when you need to do multiple installations and do not want to interrupt people who are working on machines in your system. You can also add the silent installation command in your own installation scripts.

Note:

- Silent installation is not available from the Crystal Reports Setup program and is intended only for experienced administrators of Crystal Reports.
- When you perform a silent installation, you accept the Crystal Reports end-user license agreement by default. You can find a copy of the license agreement in the `Docs` folder of your product distribution. Silent installations are intended for new installations; do not use them for upgrades.

1.4.1 Command line silent installation

The silent installation command consists of the command `setup.exe`, followed by a number of parameters that provide information about the installation. There are several valid parameters that you can use, but it is good practice to keep the silent installation as simple as possible.

Example: Sample command line silent installation

The following example creates a sub-directory `\SAP Crystal Reports 2011` and installs Crystal Reports into it.

```
setup.exe -q setupuilanguage="en" installdir="C:\Program Files\SAP BusinessObjects\SAP Crystal Reports 2011" selectedlanguagepacks="en;ja;de" installtype="Custom" registereduser="John Smith" registeredcompany="Any Company" productkey="XXXXXX-XXXXXX-XXXXXX-XXXXX" features="crw,Access,XML"
```

A silent installation log file is created in the `%TEMP%` folder to capture all placeholder DLL errors. If the installation is successful, it is copied to the logging folder. If the installation fails for any reason, the installation log file remains in the `%TEMP%` folder.

1.4.1.1 Command line parameters

The following table lists the most common parameters used in a command-line silent installation. To use a parameter, place it on the command line after the `setup.exe` command.

Note:

Parameters that are not listed in this table may be available, but they have not been tested. Untested parameters are not supported.

Parameter	Description	Example
<code>setupuilanguage</code>	The language that you want to use during the installation. You can select only one language. The languages are listed in a separate table.	<code>setupuilanguage="en"</code>
<code>installdir</code>	The SAP BusinessObjects installation path. Note: If you have already installed an SAP BusinessObjects product, the desktop client will be installed into the default <code><INSTALLDIR></code> directory.	<code>installdir="C:\Program Files\SAP BusinessObjects\"</code>
<code>selectedlanguagepacks</code>	The language packs that you want to install. You can select more than one language. The languages are listed in a separate table. Note: Separate language packs with a semicolon (;).	<code>selectedlanguagepacks="en;ja"</code>

Parameter	Description	Example
installtype	<p>The type of installation:</p> <ul style="list-style-type: none"> Default installs all components automatically. Custom lets you select features from the feature tree. 	installtype="Default"
registereduser	Any custom user name.	registereduser="John Smith"
registeredcompany	Any custom company name.	registeredcompany="Any Company"
productkey	<p>A valid product keycode.</p> <p>Tip: Remember to add a valid keycode to your <code>response.ini</code> file.</p>	productkey="XXXXX-XXXXXX-XXXXXX-XXXX"
features	<p>The features available on the feature tree.</p> <p>Note: To select features, you have to set <code>installtype</code> to Custom.</p> <p>The feature values are listed in a separate table.</p> <p>Note: Separate features with a comma (,).</p>	features="crw,Access,XML"
disablejre	<ul style="list-style-type: none"> 1 (Disable JRE installation) 0 (Enable JRE installation) <p>Note: When <code>disablejre</code> is set to 1, the following will not be installed:</p> <ul style="list-style-type: none"> JDK Seibel JDE Salesforce XML exporter 	disablejre=1
disablewebupdate service	<ul style="list-style-type: none"> 1 (Allows automatic online updating) 0 (Prevents automatic online updating) 	disablewebupdateservice=0

Parameter	Description	Example
-q	Performs a “quiet” or background installation; no prompts are displayed.	
-r	Runs the installation from a previously created response.ini file.	setup.exe -r C:\response.ini
-w	Creates a response.ini file and writes it to the specified destination.	setup.exe -w C:\response.ini

Language parameters

These values are used for both the setup and for installing language packs:

Language value	Description
en	English
fr	French
de	German
ja	Japanese
es	Spanish
zh_CN	Simplified Chinese
it	Italian
nl	Dutch
ru	Russian
ko	Korean
zh_TW	Traditional Chinese
pt	Portuguese
sv	Swedish
pl	Polish
nb	Norwegian Bokmal
da	Danish
th	Thai

Language value	Description
fi	Finnish
cs	Czech
hu	Hungarian
sk	Slovakian
tr	Turkish

Feature parameters

This table lists some of the more common values that are used for the feature parameters. Other parameters may also be available.

Feature	Description
Access	Access
ADO.NET	ADO.NET
BDE	IDAPI Database DLL
Btrieve	Pervasive Database Driver (Btrieve)
COMData	COM Data Provider
CrystalReportsRoot	Crystal Reports
crw	Crystal Reports Designer
DataAccess	Data Access
DB2	IBM DB2
dBase	dBase
EBS	Oracle E-Business Suite
Exchange	Microsoft Exchange
FieldDefinitions	Field Definitions
FileSystem	File System
HPNeoview	HP Neoview
Informix	Informix
IntegrationOptions	Integration Options

Feature	Description
JavaData	Java Data Provider
JDBC	JDBC Data Driver
JDE	JD Edwards EnterpriseOne
Mapping	Geographic Mapping
MicrosoftMail	Microsoft Mail Destination
MicrosoftOutlook	Microsoft Outlook
MyCube	OLAP Cube
MySQL_DataAccess	MySQL
NCRTeradata	NCRTeradata
NETEZZA	NETEZZA
NTEventLog	NT Event Log
OLE_DB_Data	OLE DB Data
OptionalDataDirectODBC	DataDirect ODBC
Oracle	Oracle
PGEditor	Custom Charting
Progress.OpenEdge	Progress OpenEdge
PSFT	Peoplesoft Enterprise
SAP	SAP Solutions
SFORCE	Salesforce.com Driver
SIEBEL	Siebel
Sybase	Sybase
SymantecACT	ACT!
Universe	BusinessObjects Universe
UploadWizard	Report upload Wizard
UWSC	Universal Web Services Connector
WebActivityLog	Web Activity Log

Feature	Description
XML	XML Driver

1.4.2 Response file silent installation

During an installation, you can optionally indicate that you want the installation program to create an INI file to act as a response file for subsequent installations. The installation program then records the installation options that you select as you install Crystal Reports, and saves the file to your machine.

The created INI file can be read by the installation program to silently install Crystal Reports with the same options specified during the creation of the file. This is helpful for quickly producing a silent installation of Crystal Reports.

Note:

The INI response file that is created during an installation must be included with the installation files.

1.4.2.1 To create a response file for silent installation

Follow these steps to create a `response.ini` file for a Crystal Reports response file silent installation.

1. Run `setup.exe -w C:\response.ini` from the installation media.

The interactive installation wizard appears.

2. Proceed through the wizard, selecting your installation options. Follow the instructions in the "To install SAP Crystal Reports" section.
3. On the "Start installation" page, click **Next**, and then click **OK**.

The installation program writes your installation options to the `response.ini` file, and closes.

You can now open `response.ini` in a text editor to review your installation options.

Example:

In this example, the selected installation options include English and Japanese language packs, and the English installation language.

```
### Installation directory
installdir=<INSTALLDIR>

### Product keycode
productkey="XXXXX-XXXXXXX-XXXXXX-XXXXXXX-XX"

### Registered Company
registered company="Any Company"
```

```
### Registered User
registerduser="John Smith"

### Language Packs Selected to Install
selectedlanguagepacks="en;ja"

### Setup UI language
setupuilanguage="en"

### Available features
features="crw,Access,XML"
```

Note:

If you want to add a note or comment to the `response.ini` file, you can add `###` to the beginning of a line. Lines that begin with `###` are not processed by `setup.exe`

1.4.2.2 To run a response file installation

1. From the installation directory, open the file **response.ini**.
The user will be able to change the values of response file parameters. For example: "ProductKey" and/or "InstallDir".
2. Click **Start > Run** and type `cmd` to open the "Command Prompt" window.
3. In the "Command Prompt" window, type `cd <Installer Path>`.
4. Run `setup.exe -r <response file path>\response.ini`
The installation program runs.

1.5 Maintaining or uninstalling SAP Crystal Reports

Use "Add or Remove Programs" and select one of the following options to maintain or uninstall SAP Crystal Reports:

Option	Description
"Modify"	This option allows you to modify the Crystal Reports installation program.
"Repair"	This option allows you repair or fix the Crystal Reports installation program.
"Remove"	This option allows you to remove the Crystal Reports installation program.

1.5.1 To modify SAP Crystal Reports

1. Click **Start > Settings > Control Panel**.
The "Control Panel" window opens.
2. Double-click **Add or Remove Programs**.
The "Add or Remove Programs" dialog box opens.
3. Select **Crystal Reports 2011** and click **Change/Remove**.
The "Crystal Reports 2011 Setup" dialog box appears.
4. Click **Modify** and then click **Next**.
The "Select Features" dialog box appears.
5. Select the features that you would like to modify and then click **Next**.
The modify process begins.
6. When the process is complete, click **Finish**.
The Crystal Reports application has been modified, and you are returned to the "Add or Remove Programs" dialog box.

1.5.2 To repair SAP Crystal Reports

1. Click **Start > Settings > Control Panel**.
The "Control Panel" window opens.
2. Double-click **Add or Remove Programs**.
The "Add or Remove Programs" dialog box opens.
3. Select **Crystal Reports 2011** and click **Change/Remove**.
The "Crystal Reports 2011 Setup" dialog box appears.
4. Click **Repair** and then click **Next**.
The repair process begins.
5. When the process is complete, click **Finish**.

The Crystal Reports application has been repaired, and you are returned to the "Add or Remove Programs" dialog box.

1.5.3 To uninstall SAP Crystal Reports

1. Click **Start > Settings > Control Panel**.
The "Control Panel" window opens.
2. Double-click **Add or Remove Programs**.
The "Add or Remove Programs" dialog box opens.
3. Select **Crystal Reports 2011** and click **Change/Remove**.
The "Crystal Reports 2011 Setup" dialog box appears.
4. Click **Remove** and then click **Next**.
The "Uninstall Confirmation" dialog box appears.
5. Click **Next**.
Wait while files are removed and the necessary configuration is carried out.
6. Click **Finish**.
The Crystal Reports application has been uninstalled, and you are returned to the "Add or Remove Programs" dialog box.

1.6 Upgrading SAP Crystal Reports components

If you have purchased an upgrade product activation keycode, you will find that the installation program does not remove your previous version of Crystal Reports. In general, upgrading Crystal Reports components provides you with a side-by-side installation (that is, an installation in which you can run either your old or new version of Crystal Reports).

Note:

Crystal Reports side-by-side installation is supported when upgrading from Crystal Reports XI R2, Crystal Reports XI, Crystal Reports 10, or Crystal Reports 9.

This side-by-side behavior applies to Crystal Reports and the various Software Development Kits (SDKs). SAP Crystal Reports 2011 for Visual Studio .NET can be used in side-by-side mode at runtime (that is, applications written using Crystal Reports XI R2 or Crystal Reports 10 for Visual Studio .NET will continue to run with Crystal Reports XI R2 or Crystal Reports 10 for Visual Studio .NET assemblies). However, Visual Studio integration is not side by side; only one version of Crystal Reports can be integrated into the Visual Studio .NET IDE at any given time.

Note:

For further information that may pertain to your reporting environment, consult the Release Notes included with your product distribution.
