Feature Scope Description Description for SAP Translation Hub
1 About This Document

This document describes the features that are available in SAP Translation Hub.

The availability of some of them may depend on your license agreement with SAP. To illustrate integration with other SAP offerings, the product documentation on the SAP Help Portal might include references to features that aren’t included with SAP Translation Hub. Features that are not included in this feature scope description require a separate license.
2 Introduction

SAP Translation Hub enables you to translate texts by using APIs or integrated translation workflow scenarios to access records in a multilingual database and by using machine translation.

This feature scope description provides a high-level list of the features that are available with SAP Translation Hub.

i Note
This document does not include any information about the scope of beta features available for SAP Translation Hub. Beta features are described in the documentation for the relevant beta feature.
## 3 Features

SAP Translation Hub enables you to translate texts that are stored in different systems and repositories. This section provides a high-level description of the available features.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
</table>
| Translate texts using multiple translation providers | Translate texts in the languages that SAP Translation Hub supports by using multiple translation providers:  
  - A multilingual text repository (MLTR) that contains translations verified by language specialists and official SAP terminology  
  - A machine translation solution that was trained on translations that were verified by SAP-certified language experts  
  - A company multilingual text repository (company MLTR) that contains your own language data  
  For more information, see the entry about integrating your own language data in this table. |
| Consume APIs | Use the features of SAP Translation Hub in other applications by consuming a range of API methods. The API methods are as follows:  
  - domains  
  - languages  
  - Translation project  
  - suggestions  
  - texttypes  
  - translate |
| Integrate in selected SAP products | Translate texts relevant for translation directly from development projects in SAP Web IDE and from workspaces in SAP Business ByDesign. |
| View quality rating | Estimate the quality of translations that SAP Translation Hub provides. The higher the number on a scale from 0-100, the better the quality. The quality index is part of the UI for translation projects and the response of the translate API method. |
| Manage translation projects on a UI | Perform the following tasks on a single UI:  
  - Get translations for texts that originate in multiple sources  
  - Check translations and filter according to criteria such as the translation provider or quality index  
  - Post-edit and review translations, and set a corresponding status |
<table>

<tbody>
<tr>
<td>Integrate your own language data</td>
<td>Integrate language data that is specific to your company or the industry in which your company has operations. By integrating your own language data, you can increase the quality of translations and reduce the effort required to post-edit and review translations.</td>
</tr>
</tbody>
</table>
## 4 Product Availability

This section describes the product availability aspects and the product restrictions.

<table>
<thead>
<tr>
<th>Availability Aspect</th>
<th>Description</th>
</tr>
</thead>
</table>
| Platform availability | - Latency: network latency depends on various factors; no precise information can be provided on a general level  
                        - Resilience: the system can regain a stable state after disruption  
                        - Scalability: the system responds to peaks in resource requirements, for example  
                        - Extensibility: the system can integrate other technologies  |
| Regions               | SAP Translation Hub is hosted in different regions (see SAP Cloud Platform Regions and Service Portfolio and filter by SAP Translation Hub in the Service Name column). |
| Environments          | SAP Translation Hub is available in the Neo environment.                                                                                      |
| Languages             | The UIs for SAP Translation Hub are available in the following languages:  
                        - Chinese  
                        - English  
                        - French  
                        - German  
                        - Japanese  
                        - Portuguese  
                        - Russian  
                        - Spanish |
| Accessibility         | SAP Translation Hub provides accessibility support in its administration and development tools, and the customer documentation. This includes:  
                        - Texts and information  
                        - UI elements via attributes and element IDs  
                        - Orientation and navigation throughout the UI  
                        - User interaction |
| Integration           | - Integrates with other SAP or third-party cloud products and platforms  
                        - Includes a comprehensive set of services for connectivity and integration with your cloud-based applications  
                        - Facilitates secure integration with on-premise systems running software from SAP and other vendors |
| Free trial use        | You can use SAP Translation Hub with a free trial account on SAP Cloud Platform for testing and exploring; you are not allowed to use the free trial productively. |
Restrictions

- Operations support for applications running in EU regions can be performed only by operators located in the EU.
- Upload limit: an application deployed on SAP Cloud Platform can be up to 1.5 GB. If the application is packaged as a `.war` file, the size of the unzipped content is taken into account.

**Note**
Further restrictions may apply when using the product on an infrastructure hosted by a third-party provider.

5 Service Level Agreement

For more information, see Service Level Agreement for SAP Cloud Services.

This agreement document for cloud service offerings from SAP forms the basis of your contractual relationship with SAP when referenced in specific order forms. This document contains a specific section about SAP Cloud Platform covering uptime, credits, update windows, and others.
Important Disclaimers and Legal Information

Hyperlinks

Some links are classified by an icon and/or a mouseover text. These links provide additional information.

About the icons:

- Links with the icon 🌐: You are entering a Web site that is not hosted by SAP. By using such links, you agree (unless expressly stated otherwise in your agreements with SAP) to this:
  - The content of the linked-to site is not SAP documentation. You may not infer any product claims against SAP based on this information.
  - SAP does not agree or disagree with the content on the linked-to site, nor does SAP warrant the availability and correctness. SAP shall not be liable for any damages caused by the use of such content unless damages have been caused by SAP’s gross negligence or willful misconduct.

- Links with the icon 🕵️‍♂️: You are leaving the documentation for that particular SAP product or service and are entering a SAP-hosted Web site. By using such links, you agree that (unless expressly stated otherwise in your agreements with SAP) you may not infer any product claims against SAP based on this information.

Videos Hosted on External Platforms

Some videos may point to third-party video hosting platforms. SAP cannot guarantee the future availability of videos stored on these platforms. Furthermore, any advertisements or other content hosted on these platforms (for example, suggested videos or by navigating to other videos hosted on the same site), are not within the control or responsibility of SAP.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP’s gross negligence or willful misconduct.

Gender-Related Language

We try not to use gender-specific word forms and formulations. As appropriate for context and readability, SAP may use masculine word forms to refer to all genders.
