# 1 About This Document

This document defines the functional scope of SAP IoT.

Further restrictions may apply based on your license agreement with SAP. Functions and capabilities described in the documentation of this product may exceed the functional scope of the product to explain integration with other SAP products that must be licensed separately.

## Documentation

The following documentation is available for SAP IoT:

- This feature scope description
- Getting Started Guide
- Security Guide
- API reference documentation
- End user documentation for Thing Modeler, Tenant Administration, Rule Modeling, Action Modeling, Decision Support, Geolocation, Custom Master Data

## 2 Introduction

SAP IoT is a collection of tools and applications built on SAP Business Technology Platform (SAP BTP) that can be used to create an administrative environment for managing and monitoring sensor data generated by technical objects that are part of the Internet of Things (IoT). In addition to the API services, SAP IoT offers a number of apps that are built upon the services and help you step inside the world of the Internet of Things.

# 3 Features

High-level list of features provided by SAP IoT

The following features are available with SAP IoT:

Feature	Description
Application Programming Interface (API)	<p>A collection of fine-granular micro-services that provide access to the core entities of SAP IoT Application Enablement:</p> <ul style="list-style-type: none"><li>• Authorization-related services</li><li>• Thing-related services (configuration, packages, things, events, files)</li></ul>
Device Connectivity	<p>A fully integrated abstraction layer taking care of managing, and connecting to, physical devices and protocols. Device Connectivity presents the various kinds of physical devices in a uniform way so that they can be easily matched with their virtual counterpart, the things used in an IoT scenario.</p>
IoT Edge	<p>Built-in support for processing sensor data at the edge as it is required by high- speed processing scenarios as well as for scenarios dealing with unreliable or slow data connection.</p>
Tenant Administration UI	<p>A collection of lightweight apps for basic administrative tasks:</p> <ul style="list-style-type: none"><li>• Persons</li><li>• Companies</li><li>• User Groups</li><li>• Object Authorization</li></ul>
Thing Modeler UIs	<p>Powerful apps for defining thing types, deriving things from these types, and for monitoring the sensor data ingestion:</p> <ul style="list-style-type: none"><li>• Packages</li><li>• Thing modeler</li><li>• Thing Properties Catalog</li><li>• Data Ingestion Error Log</li></ul> <p>The Thing Modeler app is also used for associating a physical device with a thing as its virtual twin, an activity known as thing onboarding.</p>
Rules UIs	<p>Apps for rule-based processing of events that occur during ingestion of time series data. The apps cover the following aspects:</p> <ul style="list-style-type: none"><li>• Rule definition</li><li>• Actions triggered by user-defined events</li><li>• Templates for notifications</li></ul>

Feature	Description
Authorization	Detailed authorization concept based on object instances and functional scopes for each tenant, with the tenant acting as a strictly isolated container.
Mass data processing	Sensor data generated by things that are onboarded on the platform are stored in a multi-component, high-performance database system built around SAP HANA, SAP's in-memory database
Time series analysis	Thing sensor data can be clustered and analyzed based on individually defined timeframes as a basis for trend observations, predictive maintenance scenarios, or similar use cases.
Location management	Allows the definition of one-dimensional or two-dimensional geographic objects (point of interest, area of interest). Things can be enriched with geographic data and events can be triggered when a thing arrives at, or leaves from, a particular location.
SAP Analytics Cloud Integration	In SAP IoT, you can gain insights about the time series data recorded by sensors with the help of graphics and visualizations provided by SAP Analytics Cloud.
Smart Sensing	A suite of apps closely integrated with SAP S/4HANA and SAP S/4HANA Cloud that let you capture events as objects that are identifiable with Auto-ID technology tags move through gates or scanners to automate business processes in manufacturing and logistics.

# 4 Product Availability

This section describes the product availability aspects and the product restrictions.

Availability Aspect	Description
Languages	English, German
Environment	This application runs in the Cloud Foundry environment.

# Important Disclaimers and Legal Information

## Hyperlinks

Some links are classified by an icon and/or a mouseover text. These links provide additional information.

About the icons:

- Links with the icon : You are entering a Web site that is not hosted by SAP. By using such links, you agree (unless expressly stated otherwise in your agreements with SAP) to this:
  - The content of the linked-to site is not SAP documentation. You may not infer any product claims against SAP based on this information.
  - SAP does not agree or disagree with the content on the linked-to site, nor does SAP warrant the availability and correctness. SAP shall not be liable for any damages caused by the use of such content unless damages have been caused by SAP's gross negligence or willful misconduct.
- Links with the icon : You are leaving the documentation for that particular SAP product or service and are entering a SAP-hosted Web site. By using such links, you agree that (unless expressly stated otherwise in your agreements with SAP) you may not infer any product claims against SAP based on this information.

## Videos Hosted on External Platforms

Some videos may point to third-party video hosting platforms. SAP cannot guarantee the future availability of videos stored on these platforms. Furthermore, any advertisements or other content hosted on these platforms (for example, suggested videos or by navigating to other videos hosted on the same site), are not within the control or responsibility of SAP.

## Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

## Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

## Bias-Free Language

SAP supports a culture of diversity and inclusion. Whenever possible, we use unbiased language in our documentation to refer to people of all cultures, ethnicities, genders, and abilities.
