1  What's new in this release

The following new features have been added.

**Note**

All features in this SAP Jam Collaboration release will be available to customers working with the preview release starting on Friday, May 10, 2019. The release will be available in production starting on Thursday, June 20, 2019.

All SAP Jam Collaboration documentation will be subject to ongoing updates for this release, with productionready versions posted in May 2019. Please check the [SAP Help Portal](https://help.sap.com) for your latest version of the product documentation.

1.1  Knowledge Base

Enhancements were made to the knowledge base of SAP Jam.

The following enhancements were made:

- Support for displaying knowledge base articles in a list view, to enable viewing more articles at a time.
- Related content is displayed for knowledge base articles, to facilitate discovering the relevant information, and to improve the issue resolution rate.
- When filtering categories to access relevant knowledge base articles, all the categories are selected by default, and you can easily deselect all categories.

1.2  Content

Improvements have been made to the way you navigate through and view content in SAP Jam.

You can navigate through the content of an uploaded document directly in SAP Jam, without the need to download and open the document.

In addition, solutions have been provided for the following issues that occurred when viewing content:

- In some cases, extra squares appeared on rendered slides.
- Some documents showed extra black and white lines.
- Round corners became rectangular in graphics and diamond shapes were cut off.
- Spreadsheets copied into presentation slides didn’t look exactly the same when rendered.
- Black pages with white font color had issues showing the white, especially on the mobile app.
- Improvements made in rendering the logo size and headlines in color.
1.3 Compliance Monitoring

Improvements have been made to ensure that content that is uploaded to SAP Jam is free of profanity and is compliant with the dictionaries defined by the administrator.

The following improvements were made:

- In addition to feed posts and comments, content that is being uploaded to SAP Jam is automatically checked for profanity or inappropriate words that were added to the Compliance area in the Admin UI.
- The following information was added to the Compliance area in the Admin UI:
  - Name of the user who used profanity.
  - Link to the content item containing profanity.
- The following changes were made to the Flagged Item Details UI:
  - The term Flags was changed to Number of Flags to indicate the number of times a user has been flagged for using profanity.
  - Display the group name.
  - The field label Members was changed to Group Members.
  - The User and Admin fields are links.
- The following enhancements were made to the design:
  - The following column order is used: Item, Flag, Term, Type, Date, and User.
  - The profane term is in bold italics font so that it stands out.
  - The item title is the link that opens the pop-up.

1.4 Microsoft Sharepoint Integration

Administrators can rename a Microsoft SharePoint repository from within SAP Jam.

You rename the repository from within SAP Jam by adding a display name to the external Microsoft SharePoint name, which by default is Documents. In this manner, you can easily distinguish between the different repositories.

1.5 Disable Company Feed in the Mobile App

Company administrators can disable the company feed so that it is not available in the SAP Jam Mobile App.

The company feed shows public, company-wide status updates. Disabling the company feed does not influence the home feed, which still allows users to see all posts by all the groups they belong to, updates that they have posted, and any post mentioning their name.
Use the following fields to disable the company feed on mobile devices:

- **Compliance & Security**
  - **Mobile**
    - **SAP Jam Mobile App**
  - **Analytics**
  - **Extensions Catalog**

- **Download Files and Share**
  - **Enable for iOS**
  - **Enable for Android**

- **Disable company feed**
  - **Disable company feed for iOS**
    - Yes
    - No
  - **Disable company feed for Android**
    - Yes
    - No

- **Alphanumeric passcode (8 - 12 characters)**
2 Feature availability

All features in this SAP Jam Collaboration release will be available to customers working with the preview release starting on Friday, May 10, 2019. The release will be available in production starting on Thursday, June 20, 2019.

All SAP Jam Collaboration documentation will be subject to ongoing updates for this release, with production-ready versions posted in May 2019. Please check the SAP Help Portal for your latest version of the product documentation.

Beta and Other Experimental Features

Experimental features are not part of the officially delivered scope that SAP guarantees for future releases. This means that experimental features may be changed by SAP at any time for any reason without notice. Experimental features are not for productive use. You may not demonstrate, test, examine, evaluate or otherwise use the experimental features in a live operating environment or with data that has not been sufficiently backed up.

The purpose of experimental features is to get feedback early on, allowing customers and partners to influence the future product accordingly. By providing your feedback (e.g. in the SAP Community), you accept that intellectual property rights of the contributions or derivative works shall remain the exclusive property of SAP.

Example Code

Any software coding and/or code snippets are examples. They are not for productive use. The example code is only intended to better explain and visualize the syntax and phrasing rules. SAP does not warrant the correctness and completeness of the example code. SAP shall not be liable for errors or damages caused by the use of example code unless damages have been caused by SAP's gross negligence or willful misconduct.

Gender-Related Language

We try not to use gender-specific word forms and formulations. As appropriate for context and readability, SAP may use masculine word forms to refer to all genders.
